Attention: Mr. James Hwang

Subject: Phase I and Phase II Environmental Site Assessment
13925 Benson Avenue, Chino, California

Leighton Consulting, Inc. (Leighton) is pleased to present this Phase I and Phase II Environmental Site Assessment Report for the property located at 13925 Benson Avenue in the city of Chino, San Bernadino County, California (Site). Leighton declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312 and ASTM International (ASTM) Standard E1527-21.

Leighton has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Leighton has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to Rexford Industrial Realty, L.P and Rexford Industrial Acquisitions LLC.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Brynn McCulloch, PG

EXECUTIVE SUMMARY

Leighton Consulting, Inc. (Leighton) has performed a Phase I and Phase II Environmental Site Assessment (ESA) in a manner which complies with ASTM Standard E1527-21 and the requirements of our Master Environmental Consulting Services Agreement with Rexford concerning the property located at 13925 Benson Avenue in the city of Chino, San Bernadino County, California (Site – see **Figure 1**).

The Site is an approximate 6.62-acre parcel that is occupied primarily by AmCo Structures, a modular building and housing design and build company. The Site is developed with one open-air canopy structure, approximately 38,400 square feet (sf) in size, which was built in the 1970s. One mobile office is located in the western portion of the Site and occupied by AmCo Structures. There are three mobile home residences located onsite – one in the southwest area, one in the center south area, and one in the southeast area. The center south portion is leased by a diesel mechanic who conducts maintenance on construction equipment and semi-trucks. Another vehicle mechanic operates in the northeast portion of the Site. The Site is largely paved with asphalt with the exception of a landscaped and gravel area located in the southern portion of the Site.

The EDR database report identified the Site as being historically occupied by several commercial/industrial businesses that may have used, stored, and/or disposed of hazardous substances.

A request for records to the San Bernardino County Fire Department (SBCFD) revealed that the Site was listed in the California Environmental Reporting System (CERS) database for hazardous waste management including several gallons of paint, paint waste, an aboveground petroleum tank, and a compressed air tank. Records also revealed that a 1,000-gallon gasoline underground storage tank (UST) was removed from the Site in February 1990. It appears that one soil sample was collected during the tank removal; however, the SBCFD did not have a file that contained lab data nor a formal closure letter. A hand-drawn map in the SBCFD files placed the tank in the eastern portion of the Site; however, the exact location is unknown. The SBCFD also held records of a spray paint booth onsite and included a complaint for “paint getting on cars located on an adjacent building” filed in 1989 regarding operation of the booth. Additionally, a spray paint booth with visible staining was observed in the southeast portion of the Site during the Site reconnaissance. There were no investigation or remediation records for the Site within the SBCFD files.

Prior to performing the Phase II investigation, Leighton identified the former UST, which did not have regulatory closure, the spray paint booths and the use of the Site for automotive repair as potential recognized environmental conditions (RECs).

On February 8, 9, and 11, 2023, Leighton completed a Phase II ESA in conjunction with this Phase I ESA to determine if the past and present uses of the Site, (i.e. mechanics, spray booths, and a former UST), had resulted in the release of heavy metals, total petroleum hydrocarbons (TPH), and/or volatile organic compounds (VOCs) to the subsurface soil and/or soil gas that could present a risk to the existing and/or future occupants of the Site.

The subsurface soil assessment included the collection of soil samples from fourteen boring locations (ENV1 through ENV14) located in the eastern and southern portions of the Site (see **Figure 2**) and the analysis of these soil samples for TPH by Environmental Protection Agency (EPA) Method 8015M, Title 22 metals by EPA Methods 6010B/7000, and VOCs by EPA Method 8260B.

A geophysical survey was completed in the eastern portion of the Site in an attempt to locate the former UST or UST excavation pit. The geophysical survey was limited by large metal equipment, vehicles, and structures located in this portion of the Site. No evidence of a UST, UST excavation pit, or other features, was discovered; however, low concentrations of TPH as gasoline (TPHg) and several gasoline component VOCs were detected in shallow soil samples collected from boring ENV1 in the northeast portion of the Site. Although these constituents were detected at concentrations below regulatory screening levels, their presence may be associated with the former UST.

Based on the results of our subsurface soil assessment, concentrations of TPH, Title 22 metals, and VOCs detected in the soil at the Site are below regulatory screening limits for residential and industrial properties, with the exception of near surface concentrations of TPH as diesel (TPHd) and two detections of lead. The detection of TPHd can be attributed to the degraded asphalt surface and do not present a concern to the present and/or future occupants of the Site. Two soil samples, ENV14-0.5 and ENV5-0.5, were reported to contain lead at concentrations of 83.6 milligrams per kilogram (mg/kg) and 260 mg/kg, respectively. These detections are below industrial use screening limits; however, they do exceed the Department of Toxic Substances Control Modified Screening Level (DTSC-SL) of 80 mg/kg for unrestricted land use. The unrestricted land use screening level is not applicable to this Site, as it is intended for commercial/industrial use only. Furthermore, the soil samples collected at the deeper depth of 2.5 feet bgs in locations ENV5 and ENV14 contained lead at concentrations below the DTSC-SL of 80 mg/kg. The lateral and vertical extent of the lead-impacted soil is limited and would not

trigger regulatory action. TPHd and lead impacted soil is considered a *de minimis* condition and not a REC.

Based on the results of our soil gas assessment, concentrations of VOCs detected in soil gas beneath the Site are below regulatory screening limits for existing and proposed commercial/industrial properties and do not present a vapor intrusion concern to the present and/or future occupants of the Site. It is our understanding that the mobile homes onsite will be vacated upon Rexford's ownership of the property, and that the Site will be used only for commercial/industrial purposes.

Recognized Environmental Conditions (RECs)

No RECs were identified in connection with the Site.

Controlled Recognized Environmental Conditions (CRECs)

No CRECs were identified in connection with the Site.

Historical Recognized Environmental Conditions (HRECs)

No HRECs were identified in connection with the Site.

Business Environmental Risks

No business environmental risks were identified in connection with the Site.

Based on the findings of this Phase I and Phase II ESA, Leighton recommends the following:

- Preparation of a Soil Management Plan to address known and potentially impacted soils that may be encountered during future assessment or redevelopment work.

1.0 INTRODUCTION

1.1 Authorization

Leighton Consulting, Inc. (Leighton) performed a Phase I and Phase II Environmental Site Assessment (ESA) of the property located at 13925 Benson Avenue in the city of Chino, San Bernadino County, California (Site – **Figure 1**). This Phase I and Phase II ESA was prepared in accordance with the authorization of Rexford Industrial Realty L.P. and Rexford Industrial Acquisitions, LLC (Rexford).

1.2 Purpose

The purpose of the Phase I ESA was to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International (ASTM) Standard E1527-21, recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the Site. The definition of RECs, HRECs, CRECs, and *de minimis* conditions presented below are in accordance with ASTM Standard E1527-21, the current EPA recognized standard for Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability protections.

RECs are defined, according to ASTM E1527-21 as: *"(1) the presence of hazardous substances or petroleum products in, on, or at a subject property due to a release to the environment: (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment*".

HRECs are defined, according to ASTM E1527-21 as: "*a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitation)*".

CRECs are defined, according to ASTM E1527-21 as: "*a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed*

to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)".

De minimis conditions are defined by ASTM E1527-21 as "*a condition related to a release that generally does not present a threat to the human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is neither a REC nor a CREC*" (ASTM E1527-21, 2021).

1.3 Scope of Work

The scope of work was performed in accordance with Leighton's Master Services Agreement with Rexford dated February 10, 2022 and our Phase II ESA proposal dated January 31, 2023, and included the following tasks:

- A reconnaissance-level visit to the Site for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products;
- Records review (including review of previous environmental reports, selected governmental databases, and historical review);
- Interviews;
- Completion of a soil and soil gas assessment; and
- Preparation of this report presenting our findings.

1.4 Significant Assumptions

Leighton assumes that the purpose of this Phase I Phase II ESA is to provide appropriate inquiry into the previous ownership and use of the Site so that the Client may qualify for the CERCLA landowner liability protections as defined in CERCLA, 42 USC §9601(35)(B). Leighton also assumes that the information provided by the Client and its agents, regulatory database provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

Leighton performed the Phase I ESA of the Site in conformance with the scope and limitations of ASTM Standard E1527-21.

This Phase I ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the Phase I and Phase II ESA described herein. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, the methods utilized to collect and evaluate the data, and that a full and complete determination of environmental risks cannot be made. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of this information.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Site that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 Special Terms and Conditions

The scope of work for this Phase I and Phase II ESA did not include testing of electrical equipment for the presence of PCBs or collection of environmental samples such as groundwater, building materials, paint, or other media, with the exception of soil and soil gas; assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas; assessment of the potential presence of radionuclides; or assessment of nonchemical hazards such as the

potential for damage from earthquakes or floods. This Phase I and Phase II ESA also did not include an extensive assessment of the environmental compliance status of the Site or of businesses operating at the Site.

1.7 User Reliance

This report has been prepared for the exclusive use of and may only be relied upon by Rexford Industrial Realty, L.P, Rexford Industrial Inc., Rexford Industrial Acquisitions, and/or their subsidiaries, affiliates and assigns, as their interests may appear. This report cannot be relied upon by any other person or entity without Leighton's prior express written permission.

1.8 Important Information about Geoenvironmental Reports

Rexford is referred to **Appendix I** regarding important information provided by Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is located southeast of the intersection of Benson Avenue and Daniels Street, at the address of 13925 Benson Avenue in the city of Chino, San Bernadino County, California (**Figure 1**). The San Bernardino County Assessor's Office has designated the Site as Assessor Parcel Number (APN) 1021-211-02-0000. A legal description for the Site is included in the Environmental Lien and Activity and Use Limitation (AUL) Search Report attached in **Appendix D**.

2.2 Subject Site Vicinity General Characteristics

The Site vicinity is developed for industrial and commercial use.

2.3 Current Use of the Subject Site

The Site is an approximate 6.62-acre parcel that is occupied primarily by AmCo Structures, a mobile structure builder. The center south portion is leased by a diesel mechanic who conducts maintenance on construction equipment and semi-trucks. Another vehicle mechanic operates in the northeast portion of the Site. (**Appendix B**).

2.4 Descriptions of Structures, Roads and Other Improvements on the Property

The Site is developed with one open-air canopy structure, approximately 38,400 square feet (sf) in size, which was built in the early 1970s. One mobile office is located in the western portion of the Site and occupied by AmCo Structures. There are three mobile home residences located onsite – one in the southwest area, one in the center south area, and one in the southeast area. The majority of the Site has an asphalt paved surface except for a landscaped and gravel area located in the southern portion of the Site.

2.5 Results of Environmental Lien and AUL Search

An environmental lien and AUL search was completed for the Site on January 30, 2023. No environmental liens or AULs were found associated with the Site (**Appendix D**).

2.6 Current Uses of Adjoining Properties

Properties adjoining the Site are described in the table below.

PROPERTIES ADJOINING SUBJECT SITE		
Direction	**Address**	**Company Name/Site Use**
North	5777 and 5780 Soestern Court	Soestern Packaging Inc., Asbin, and MCE United Group
East	13930, 13910, and 13822 Oaks Avenue	Coburn Equipment Inc., Wacker Chemical Corporation, and REED Concrete Pumps & Shotcrete Equipment
South	13999 Benson Avenue	SCE Training Facility
West	13950, 13930, and 13970 Benson Avenue	Valbruna Coporation, and Litek Composites Corp.

3.0 USER PROVIDED INFORMATION

The User of this Phase I and Phase II ESA is identified as the Rexford. As a part of the ASTM E1527-21 process, Mr. James Hwang, Assistant Vice President of Acquisitions for Rexford Industrial Reality, Inc., completed a User Questionnaire for the Site on February 6, 2023. Information provided by Rexford Industrial is summarized below.

3.1 Environmental Liens or Activity and Use Limitations

No environmental liens or AULs were identified in the EDR Environmental Lien and AUL Search Report, dated January 30, 2023. A copy of the Environmental Lien and AUL Search report is included in **Appendix D**.

3.2 Specialized Knowledge

Mr. Hwang does not have any specialized knowledge or experience with the Site or nearby properties.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Hwang was not aware of any commonly known or reasonably ascertainable information related to the Site.

3.4 Valuation Reduction for Environmental Issues

Mr. Hwang indicated that the purchase price being paid for the Site is based on fair market value.

3.5 Owner, Property Manager, and Occupant Information

According to the Environmental Lien and AUL Search report, the Site is currently owned and managed by Rick Martin, Trustee of Leon O. Martin Revocable Trust. The Site is currently occupied by AmCo Structures, two small mechanic shops, and the three mobile residences.

3.6 Reason for Performing Phase I ESA

According to Mr. Hwang, the reason for requesting this Phase I ESA is for due diligence purposes related to the potential purchase of the Site.

3.7 Other

Rexford did not provide Leighton with any environmental reports prepared for the Site.

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the Site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The Site is located in Section 13 of Township 2 South, Range 8 West of the San Bernardino Baseline and Meridian. Topographic map coverage of the Site vicinity is provided by the United States Geological Survey (USGS) Ontario and Prado Dam, California Quadrangles 2018. The elevation of the Site is approximately 687 feet above mean sea level and the topography is relatively flat.

4.1.2 Surface Water

Surface water was not observed on the Site. Cypress Creek is located approximately 5,260 feet east of the Site.

4.1.3 Geology and Soils

The Site is located within the Peninsular Ranges Geomorphic Province of California, which consists of a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault . The Chino Basin was formed by sediments from erosion in the Chino Hills, Puente Hills, and San Gabriel Mountains, which filled a structural depression. The Site is underlain by Pleistocene to Holocene-age alluvium consisting of poorly sorted gravel, sand, silt, and clay that is approximately 500 feet thick. The alluvium is underlain by sedimentary rocks, which are considered to be the base of the aquifer and consist of a sequence of consolidated marine and continental conglomerate, sandstone, and siltstone, which is approximately 5,000 feet thick. The sedimentary rocks overlie a pre-Tertiary basement complex consisting of granodiorite and plutonic rock of the southern California Batholith (Tetra Tech, 2022).

4.1.4 Hydrogeology

The Site is located within the Chino Subbasin of the Upper Santa Ana Valley Groundwater Basin. The Chino Subbasin is bounded to the east by the Rialto-Colton Fault and to the southeast by the contact with impermeable rocks forming the Jurupa Mountains and low divides connecting the exposures (DWR, 2006). According to the Water Quality Control Plan, the Site lies within the Chino North Groundwater Management Zone. Present and potential future beneficial uses of this groundwater management zone includes municipal and domestic supply, agricultural supply, industrial service supply and industrial process supply. Additionally, water and wastewater management practices and goals for the Chino Basin were used to identify an alternative set of Management Zones within the basin, identified as "maximum benefit" zones. The Site is located within a maximum benefit management zone (Chino 1), which applies unless the Regional Board determines that lowering of water quality is not of maximum benefit to people of the state and in that case, an antidegradation management zone would apply (State Water Resources Control Board, 2019). Nearby groundwater monitoring data appear to indicate that the groundwater flow direction in the vicinity is likely south-southeast (EEC, 2021).

Information obtained from the State Water Resources Control Board's (SWRCB) GeoTracker database indicates that groundwater in the vicinity of the Site is approximately 99 feet below ground surface (bgs).

4.1.5 Oil and Gas Fields

Leighton reviewed the California Geologic Energy Management Division (CalGEM) Well Finder online database on January 27, 2023. No evidence of onsite oil or gas wells, oil field-related facilities, or oil fields were observed on or adjacent to the Site.

4.1.6 Wetlands and Floodplains

The Site is not depicted within a flood zone or wetlands area but is within a "0.2% Annual Chance Flood Hazard" (i.e., 500-year flood zone) according to the EDR Radius Map™ report (**Appendix E**).

The United States Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) maps (USFWS, 2022) were reviewed on January 27, 2023, to identify potential wetlands on or immediately adjacent to the Site that could be under the jurisdiction of the U.S. Army Corps of Engineers (USACE) (as defined in 33 Code of Federal Regulation [CFR] § 328.3, 40 CFR § 122.2, and any other applicable guidance). According to the USFWS NWI map, mapped wetlands are not mapped onsite.

4.1.7 Radon

Radon is not regulated within the State of California. Nonetheless, the California Department of Public Health (CDPH) and the United States Environmental Protection Agency (US EPA) both recommend a threshold of 4 picocuries per liter (pCi/L) above which certain precautions be taken to mitigate radon buildup in structures.

The CDPH maintains a database of indoor radon levels that are sorted by zip code. According to the most recent update prepared in February 2016, 18 tests were completed in the Site zip code of 91710 and none of the tests exceeded 4 pCi/L. Therefore, there appears to be low potential for radon to adversely affect the Site.

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Leighton using the EDR Radius Map™ Report with GeoCheck® environmental database report system, dated January 27, 2023. Details and descriptions of the database search are provided in the EDR database report. The database report meets the government records search requirements of ASTM Standard E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The database listings were reviewed within the specified radii established by the ASTM Standard E1527-21. A copy of this report is included in **Appendix E**.

4.2.1 Site

The Site address of 13925 Benson Avenue was identified in the EDR database report. Below is a summary of information included in the EDR database report.

BUSINESS	DATABASE SUMMARY
Dorothy Worthy; **1X M Company;** **M Co Incorporated; and** **Brian Gardner**	M Co Incorporated is listed in the California Integrated Water Quality System (**CIWQS**) database for storm water construction. It is also listed in Enforcement & Compliance History Information (**ECHO**), the Statewide Environmental Evaluation and Planning System (**SWEEPS UST**), and in the Historic Underground Storage Tank (UST) database (**HIST UST**) for having an UST containing leaded motor vehicle oil from approximately February 1988 to August 1991. Dorothy Worthy, 1XM Company, and M Co. Inc., are listed in the Facility and Manifest Data (**HAZNET**) and the Hazardous Waste Tracking System **(HWTS)** for hazardous waste management activities including for paint sludge, organic solids and latex waste that was generated onsite but transported off for proper disposal. Brian Gardner is listed as "active" in the Registered Waste Tire Haulers Listing (**HAULERS**). M Co Inc. is also listed in the San Bernardino County Permit (**SAN BERN CO. PERMIT**) and the California Environmental Reporting System (**CERS**) for hazardous waste management and as a chemical storage facility. CERS violations were reported for failure to annually renew the business plan; however, all of the violations were returned to compliance and none of the violations reported a release of petroleum or other hazardous materials. M Co Inc. is also listed as an active facility in the Facility Index System/Facility Registry System (**FINDS**) and Emissions Inventory Data (**EMI**) for being a hazardous air pollutant due to an onsite spray paint booth, although this facility is permitted through the South Coast Air Quality Management District (SCAQMD) to operate (see Section 4.2.3). Based on the results of our concurrent Phase II ESA summarized in Section 7.0 of this report, the onsite spray paint booth and former UST are **not considered RECs associated with the Site.**

4.2.2 Offsite

Information in the EDR database report was reviewed for facilities of potential environmental concern to the Site. Additionally, the SWRCB Geotracker website and Department of Toxic Substances Control (DTSC) Envirostor website were used to supplement the information in the EDR database report.

Provided below is a brief summary of some of the more notable offsite database listings, either due to their proximity to the Site and/or nature of their listing:

NOTABLE LISTINGS	
LISTING NAME	**ADDRESS / LOCATION**
SCE TRAINING CENTER; SOUTHERN CALIFORNIA EDISON – CHINO SUBSTATION; EDISON CHINO;	**14005 South Benson Avenue (Adjacent to the south of the Site)**
Southern California Edison (SCE) is listed in various databases including the RCRA NONGEN /NLR, FINDS, ECHO, CHMIRS, NPDES, SAN BERN CO PERMIT, CIWQS, CERS HAZ WASTE, CERS, ENVIROSTOR, VCP, AST, and RCRA-LQG databases and included listings for hazardous waste management activities, stormwater construction permits, and the presence of an AST (218,150-gallon) on the property. This property was also listed in the ENVIROSTOR database as a cleanup program site with a Closure/No Further Action (NFA) Letter issued for the case on October 28, 1997. This property has been a substation since 1912. Potential contaminants of concern were polynuclear aromatic hydrocarbons (PAHs), arsenic, and other solvents used on various machinery. The potential media affected was soil. Additional details regarding this closed case are further discussed in Section 4.2.3. The property is also listed as Certified Hazardous Waste for large quantity waste generator. There were several permits with San Bernadino County for using and storing hazardous waste chemicals. The last permit is listed as inactive as of February 28, 2014. **Given the agency issuance of a NFA letter, and the hydrologically down-gradient location from the Site, it is our opinion this offsite listing does not have potential to adversely affect the Site.**	
AMERICAN EAGLE WHEEL	**5780 Soestern Court (~655 feet north adjacent to the Site)**
American Eagle Wheel is listed in HWTS, RCRA-SQG, EMI, HAZNET, NPDES, CIWQS, and CERS for being a small quantity waste generator, hazardous air pollutants, and storing and using waste oil and other chemicals. This facility is also listed in the Facilities in Industries that May Be Handling PFAS Listing (PFAS ECHO) database as a metal manufacturing facility. American Eagle Wheel is also listed in the CPS-SLIC database with an Open -Site Assessment cleanup program site for potential contaminants of concern of 1,1,1-trichloroethane (TCA), chromium VI, dichloroethane (DCA), dichloroethene (DCE), tetrachloroethylene (PCE), and trichloroethylene (TCE) to soil and soil vapor. The property was used as a wheel manufacturing facility from 1990 to 2016. A Phase I ESA was conducted by EFI Global Inc (EFI) in August 2016 and several RECs were identified related to the use of the facility for wheel manufacturing and chlorinated solvents stored and used onsite. There is a documented release of chlorinated solvents, affecting soil, soil gas, and groundwater. In September 2016, a Phase II investigation did not identify a vapor intrusion concern at the property. Additional details regarding this open case are further discussed in Section 4.2.3. **Based on a review of information obtained through the SWRCB Geotracker database and discussed in Section 4.2.3, it is our opinion this offsite listing does not have potential to adversely affect the Site.**	

NOTABLE LISTINGS	
LISTING NAME	**ADDRESS / LOCATION**
RMS FINISHING INC.	**5777 Soestern Court (~115 feet north adjacent of the Site)**
RMS Finishing Inc., (RMS) is listed in the RCRA-LQG, FINDS, ECHO, WDS, CHMIRS, NPDES, SAN BERN. CO. PERMIT, CIWQS, and CERS databases including hazardous waste management activities and industrial stormwater permits. This facility is also listed in the PFAS ECHO database as a metal coating facility. RMS is also listed in the ENVIROSTOR database as a cleanup program site with a Closure/NFA Letter issued for the case on May 18, 2011. The potential contaminants of concern were reported to be heavy metals and the potential media affected was soil. This facility is a subsidiary of American Eagle Wheel (see above) which sells chromed wheels for automobiles and trucks. RMS is authorized to operate a Tiered Permitting Onsite Hazardous Waste Treatment System under the Conditional Authorization Tier (DTSC 1772) since October 2000. Process Line Water is used until it exceeds a Total Dissolved Solids limit then it is filtered through the treatment system where it results in brine water and filter cake. The brine water is stored in an 8,000-gallon tank then sent offsite for further treatment. The sludge is sent to another offsite facility to be recycled. Additional details regarding this closed case are further discussed in section 4.2.3. **Given the agency case closure (see Section 4.2.3), it is our opinion this offsite listing does not have potential to adversely affect the Site.**	
VALBRUNA STAINLESS INC.	**13950 Benson Ave (west adjacent of the Site)**
Valbruna Stainless Inc., (Valbruna) is listed in the RCRA NONGEN / NLR database with a NAICS description for “Metal Service Centers and Offices”. No violations or evaluations are found in the database listing. Valbruna is also listed in the CERS HAZ WASTE, HAZNET, CERS, HWTS, and the SAN BERN CO PERMIT including listings for hazardous waste management activities including the management of aqueous solutions, unspecified solvent mixtures, other organic solids, unspecified oil-containing waste, and waste oil and mixed oil. CERS violations were reported for improper labelling, documentation (i.e missing EPA ID, business plan, missing manifest receipts), operational (missing inspections, open containers, improper waste manifest), and employee training violations. These violations were all reported as returned to compliance. One notable violation in the database report that the facility may have been illegally disposing of a hazardous waste as non-hazardous waste via JSE Environmental, however they were returned to compliance on 02/09/2016. None of the databases reported a release of petroleum or other hazardous materials. **This facility is expected to be hydrologically cross-gradient to the Site, and given the databases reviewed do not report a release of petroleum or other hazardous materials, it is our opinion this offsite listing does not have potential to adversely affect the Site.**	

ALPHA MODULAR SYSTEM; SILMIX CA; and WACKER CHEMICAL CORP;	**13910 Oaks Ave (east adjacent of the Site)**
Silmix CA (Silmix) is listed in the RCRA NONGEN / NLR database with a NAICS description for "synthetic rubber manufacturing". No violations or evaluations were found in the database listing. This facility is also listed in the PFAS ECHO database as plastics and resins facility. Alpha Modular System and Wacker Chemical Corp are listed in various databases including the RCRA-SQG, FINDS, ECHO, CERS HAZ WASTE, NPDES, SAN BERN. CO. PERMIT, CIWQS, and CERS databases for hazardous waste management activities and for industrial stormwater permits. CERS violations were reported for improper reporting (under reporting, missing information, and business plan) and improper labelling. All of the reported violations were returned to compliance. None of the listings reported a release of petroleum or other hazardous materials. **This facility is expected to be hydrologically cross-gradient from the Site, and given the databases reviewed do not report a release of petroleum or other hazardous materials, it is our opinion this offsite listing does not have potential to adversely affect the Site.**	
REED MFG CO.	**13822 Oaks Ave (east adjacent of the Site)**
Reed Mfg Co. (Reed) is listed in the RCRA NONGEN / NLR databases with a NAICS description for "cement manufacturing". No violations or evaluations were found in this database listing. Reed is also listed in the AST, CERS HAZ WASTE, CERS TANKS, SAN BERN. CO. PERMIT, and CERS databases for hazardous waste management activities including the presence of an aboveground petroleum storage tank (2,270-gallons). CERS violations were reported for management (missing designated person, SPCC plan implementation), documentation (missing inspection records, business plan, and missing reportable inventory), improper labelling (missing dates, information, and labels), and employee training violations. All of the reported violations were returned to compliance. None of the listings reported a release of petroleum or other hazardous materials. Reed is also listed in the ENVIROSTOR database for a historic listing under Sunshine Metal Products with a Refer: RCRA status date as of 06/01/1995. The potential contaminants of concern were reported for acid solution 2>pH with metals and alkaline solution without metals. No potential media is listed in the database report and no additional documents were made available for review in regard to this historic case. **This facility is expected to be hydrologically down-gradient from the Site; therefore, it is our opinion this offsite listing does not have potential to adversely affect the Site.**	

The offsite listings identified in the EDR database report and not summarized above were reviewed and not interpreted to pose an adverse risk to the Site at the time of this report preparation based on one or more of the following:

- No evidence of a release;
- Closure received from regulatory agency;

- Distance of the facility to the Site; and
- Direction of groundwater flow (south/southeast) and location of the facility to the Site (down-gradient or cross-gradient).

4.2.3 Regulatory Agency Contacts

Leighton researched other reasonably ascertainable, local and regional regulatory agency records. Record requests were submitted in January 2023. The results are summarized below:

CITY OF CHINO (CCCPR)
A request for a records search was made to the City of Chino CA Public Records (CCCPR) department using the associated Site address on January 10, 2023. The CCCPR replied on January 19, 2023, indicating that records were found for the Site. Various building permits were listed for the Site address of 13925 Benson Avenue from 05/2/1972 to 02/11/1991. No building permits of environmental concern were found. Various environmental inspection reports were also listed for the Site from 02/24/2015 to 08/12/2008. One report noted that at the time of the site visit there was some staining near the canopy from spilled wastewater.
SCAQMD
An online records search was completed using the SCAQMD F.I.N.D database on January 30, 2023. One record was identified for the Site for having spray paint equipment in an open booth that has an active permit to operate. There was one violation notice on 01/23/1989 and the case was closed on 08/29/1990. There is a violation to the property adjacent to the east, Coburn Equipment Inc. The case was closed on 08/09/2000. REED LLC, which is adjacent to the east of the Site, has an active permit for a spray paint booth. RMS Finishing, which is adjacent to the north of the Site, has permits to operate a chrome plating tank and mist eliminator. There were several violations for the property from January 2002 to September 2010. All violations have been closed.
NATIONAL PIPELINE MAPPING SYSTEM (NPMS)
An online review of the NPMS pipeline database on January 30, 2023. No gas transmission or hazardous liquid pipelines were identified on or directly adjacent to the Site.
CAL FIRE
A request for a records search was made to CAL FIRE using the associated Site address on January 30, 2023. Cal Fire responded by indicating that records were not found for the Site.

DTSC ENVIROSTOR

A request for a records search was made to the DTSC Cypress and Chatsworth offices using the associated Site address on January 10, 2023. The Cypress and Chatsworth offices of the DTSC responded by indicating no records were found for the Site.

A review of the DTSC Envirostor database on January 30, 2023, revealed two (2) listings within an approximate 0.50-mile radius of the Site:

Edison Chino, 14005 South Benson Avenue (~200 feet south of the Site): The Southern California Edison property has been an electrical substation since 1912 and is listed with a cleanup status of NFA as of 10/28/1997. The potential contaminants of concern were polynuclear aromatic hydrocarbons (PAHs), arsenic and other solvents used on various machinery. The potential media affected was soil. The DTSC oversaw all onsite investigations and field activities related to a Voluntary Cleanup Agreement with SCE in May 1996. Given DTSC's issuance of a NFA letter on October 28, 1997, and the hydrologically down gradient location from the Site, **it is our opinion this offsite listing does not have potential to adversely affect the Site.**

Details regarding this property and other related database listings are also discussed above in section 4.2.2.

RMS Finishing Inc., 5777 Soestern Court (~115 feet north adjacent of the Site): RMS Finishing Inc., (RMS) is listed with a cleanup status of "No Further Action" as of 05/18/2011. The potential contaminants of concern are listed as various heavy metals and the potential media affected is listed as soil. RMS is a subsidiary of American Eagle Wheel which sells chromed wheels for automobiles and trucks. RMS has been authorized to operate a Tiered Permitting Onsite Hazardous Waste Treatment System under the Conditional Authorization Tier (DTSC 1772) since October 2000. Process Line Water is used until it exceeds a Total Dissolved Solids limit then it is filtered through the treatment system where it results in brine water and filter cake. The brine water is stored in an 8,000-gallon tank then sent offsite for further treatment. The sludge is sent to another offsite facility to be recycled.

A review of records available on Envirostor revealed that the DTSC issued an "Approval of Preliminary Endangerment Assessment Report dated May 28, 2009, for RMS Finishing, Incorporated, located at 5777 Soestern Court, Chino, California 91710" letter on February 10, 2010. A review of this letter revealed that the report had a few issues remaining to be resolved, that were corrected, therefore the DTSC approved the PEA Report as written.

Given the DTSC agency case closure on May 18, 2011, and given the likelihood of soil only impacts, **it is our opinion this offsite listing does not have potential to adversely affect the Site.**

SANTA ANA REGIONAL WATER QUALITY CONTROL BOARD (SARWQCB) GEOTRACKER

A request for a records search was made to the SARWQCB using the associated Site address on January 10, 2023. They responded by indicating that records were not found for the Site on 01/17/2023.

A review of the Geotracker database on January 30, 2023, revealed one notable listing on the adjacent property to the northwest of the Site. A review of records revealed the following:

American Eagle Wheel, 5780 Soestern Court (~655 feet northwest adjacent to the Site): American Eagle Wheel is listed as with an Open- Site Assessment as of 01/01/2019. The facility is listed for potential contaminants of concern of TCA, chromium VI, DCA, DCE, PCE, and TCE to soil and soil vapor.

American Eagle Wheel operated as a wheel manufacturing facility from 1990 to 2016. The facility used and stored metals, solvents, coolants, and oils. Most of the hazardous materials were stored on the southeast corner of the property. A sump and clarifier were used to collect and treat industrial wastewater before it entered the municipal sewer system. A Phase I ESA was conducted by EFI in August 2016 and several RECs were identified related to the use of the facility for wheel manufacturing and chlorinated solvents stored and used onsite. None of the RECs EFI identified were due to releases onsite. In September 2016, Partner Engineering and Science, Inc (Partner) conducted a Phase II subsurface investigation to evaluate RECs identified by EFI. Partner found little to no VOC contaminations except in one borehole on the eastern side of the property that had 1,1-DCE, PCE and TCE approximately at 40 to 60 feet bgs. In early 2017, EEC conducted an additional site assessment, which consisted of 12 soil borings and soil vapor probes. They found that there were detections of VOCs in the samples along the eastern property line where the former wash line/degreasing station and sump area was located. EEC identified an onsite release.

Details regarding this property and other related database listings are also discussed above in Section 4.2.2.

Based on a review of information obtained through the SWRCB Geotracker database it is our opinion this offsite listing does not have potential to adversely affect the Site.

CHINO VALLEY FIRE DEPARTMENT (CVFD)

A request for a records search was made to the CVFD using the associated Site address on January 30, 2023. The CVFD responded by indicating records were found for the Site. One document was made available for review and included a Fire Safety inspection notice. Several violations were reported; however, none of the violations indicated the release of petroleum or other hazardous materials and are therefore not considered a REC associated with the Site.

SAN BERNARDINO COUNTY FIRE DEPARTMENT (SBCFD)
A request for a records search was made to the SBCFD using the associated Site address on January 10, 2023. They responded by indicating that records were found for the Site, which can be found in Appendix G. The Site was listed in California Environmental Reporting System (CERS) for having hazardous materials of several gallons of paint and paint waste, aboveground petroleum tank, and compressed air tank. There was a 1,000-gallon gasoline UST that was removed in February 1990. IT appears one soil sample was collected during the tank removal, however, San Bernardino County Fire Department (SBCFD) did not have a file that contained lab data nor a formal closure letter. A hand-drawn map with the SBCFD files places the tank in the eastern portion of the Site, however, the exact location is unknown. SBCFD also had record of a spray paint booth onsite with a complaint filed in 1989 regarding operation of the booth and "paint getting on cars located on an adjacent building". There were no remediation records for the Site within the SBCFD files. **Potential releases of hazardous substances associated with the former UST and former and current spray booths are environmental concerns; however, based on the results of our concurrent Phase II ESA summarized in Section 7.0 of this report, the features are not considered a REC associated with the Site.**

Records requests were not completed for the following agencies since they were determined by Leighton to not be applicable to the Site:

- The State Department of Water Resources – No onsite drinking water wells.
- County Vector Control – No wetlands onsite and urban nature of the Site.
- Flood Control District – Based on a review of EDR records, the Site is not mapped in a flood zone.

Additionally, the Site is in a highly urbanized area, and it is very unlikely that endangered species would be found at the Site. Therefore, Leighton did not conduct further research into endangered species at the Site.

The databases reviewed as part of this work assignment were determined in Leighton's professional judgment to be sufficiently complete and sufficiently current to serve as the basis for Leighton's opinions expressed herein.

4.2.4 Other Reports

No other Phase I ESA prepared for the Site were provided by Rexford for review.

4.2.5 Vapor Encroachment

Leighton reviewed the Vapor Encroachment Screen (VES) produced using EDR's Vapor Encroachment Worksheet application that gathers regulatory database information from the accompanying Radius Report and allows the user to integrate groundwater information, regional geology, and other information to evaluate the concern for potential vapor encroachment from onsite activities and from adjacent properties. The VES application was designed by EDR to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E2600-15), also referred to as the Tier 1 VES, as defined by ASTM E2600-15.

Using the VES application, in connection with the results of our concurrent soil gas survey (Section 7.0), there are no onsite or offsite listings or releases presenting a vapor encroachment concern to current or future industrial occupants of the Site. **Vapor encroachment is not a REC in connection with the Site.**

4.3 Historical Use Information on the Property

Leighton reviewed select historical resources to determine previous Site and surrounding property uses. These resources were reviewed for evidence of activities which would suggest the presence of hazardous substances at the Site, and to evaluate the potential for the Site to be impacted by offsite sources of contamination. Following is a summary of our review of those resources.

Info Type	Years	Source	Summary of Results
Topo Maps	1897 1900 1902 1903 1933 1941 1942 1944 1947 1949 1950 1954 1967 1973	EDR	• **1894, 1900, 1902, and 1903**: There is no map coverage of the Site. • **1933, 1941, 1942, 1944, 1947, 1949, 1950, 1954, and 1967:** No structures, tanks, wells, or other features are depicted on the Site or surrounding properties except for a single structure depicted on the west adjacent property in maps from 1933, 1941, 1942, 1950, 1954, and 1967. The Site is not shown on the 1942, 1949, and 1954 maps. A road is depicted to the west of the Site and another road to the south of the Site. A few buildings are depicted to the northwest of the Site. The SCE Substation is to the south of the Site. • **1973, 1976, and 1981**: Two buildings are depicted on the Site (The Site is not shown on the 1976 map). No significant changes are depicted on the surrounding properties.

Info Type	Years	Source	Summary of Results
	1976 1981 2012 2015 2018		• **2012, 2015,** and **2018:** The Site and surrounding properties are in a built-out area in which only landmark structures are shown; therefore, structures are not depicted on the Site or surrounding properties. Benson Avenue is depicted to the east of the Site. Daniel Street is depicted to the northwest of the Site.
Aerial Photos	1938 1946 1948 1953 1959 1964 1966 1972 1975 1985 1989 1990 1994 2002 2006 2009 2012 2016 2020	EDR	• **1938, 1946, 1948, 1953, 1959, 1964, and 1966**: Agriculture land grain fields and/or row crops) is observed on the Site and surrounding properties. Dirt roads are observed to the north and west of the Site. A house and farm structures are observed to the west. • **1972, and 1975**: Two structures are observed on the Site, one large rectangular structure in the center and one smaller structure along the southern center section of the Site, assumed to be the former spray booth. The surrounding properties are unchanged. • **1985, 1989, and 1990**: Additional structures, mobile homes/trailers, are observed on the Site to south and the northeast corner. Several structures are observed on the property adjacent to the east. The small structure along the southern border is no longer observed. • **1994**: The Site is observed to be unchanged, however, the surrounding properties are observed to be used for commercial/industrial facilities. • **2009, 2012,** and **2016:** The Site is developed with the present-day commercial/industrial structure. The present-day commercial/industrial structures are observed to the east, west, north, and south of the Site. Benson Avenue is observed to the west of the Site. Daniels Street is observed to the north of the Site.
Sanborn® maps	N/A	EDR	Sanborn maps were not available for the Site
City Directories	1965-2017	EDR	The Site address of 13925 Benson Avenue was listed as AmCo Structures (2014 - 2017), and M Co Inc and Martin Leon (1975-2008), The surrounding properties are listed as mostly commercial/industrial properties. Properties of environmental concern were not identified.
Building Permits	2008-2021	EDR	A building permit was listed for the Site address of 13925 Benson Avenue, primarily pertaining to electrical work in August 2016. Permits for surrounding properties range from addition/alteration to electrical to new construction.
Property Tax Map	N/A	EDR	Property tax maps were not available for the Site.

Summary of Historical Review – The Site was agricultural land (primarily grain fields) from at least 1938 until approximately 1972, when the Site was redeveloped for industrial/commercial use. The present-day structure was built in 1972. Since the Site was developed for commercial/industrial use, the Site has been primarily occupied by tenants M Co Inc from 1975 to 2008 and AmCo Structures from 2014 to 2017.

The adjoining properties were used for agricultural purposes from at least 1938 until the mid-1970s. The surrounding properties were developed for commercial/industrial use from the mid-1970s to early 2000s.

No RECs, CRECs, or business environmental risks were identified in connection with the Site, although Leighton identified the operation of a fuel UST and the presence of former and current spray paint booths as potential RECs prior to the performance of the Phase II ESA. Additionally, the EDR database report identified the Site as being historically occupied by commercial/industrial businesses that may have used, stored, and/or disposed of hazardous substances. These potential RECs were investigated as part of the Phase II ESA summarized in Section 7.0 and were determined to not present RECs associated with the Site.

Information included on the SWRCB Geotracker website indicates that the property adjacent to the north is an active clean-up site (see Section 4.2.3). This offsite property does not have potential to adversely affect the Site.

Copies of historical resources used to assess past Site and adjoining property uses (i.e., topographic maps, aerial photos, city directories, etc.) are provided in **Appendix F**.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On January 26, 2023, a representative of Leighton conducted a reconnaissance–level assessment of the Site, which consisted of observing and documenting existing conditions of the Site and nature of the neighboring development. Photographs of the Site are presented in **Appendix B** and their view directions are noted on **Figure 2**. Items noted during the Site reconnaissance are also depicted on **Figure 2**.

5.2 General Property Setting

The Site vicinity is generally developed for commercial/industrial use.

The Site is an approximate 6.62-acre parcel that is occupied by AmCo Structures, a mobile structure builder. The center south portion is leased by a diesel mechanic who conducts maintenance on construction equipment and semi-trucks. Another vehicle mechanic operates in the northeast portion of the Site. The majority of the Site has an asphalt paved surface except for a landscaped and gravel area located in the southern portion of the Site (**Photos 1 through 38, Appendix B**).

5.3 Exterior and Interior Observations

Exterior Observations - The exterior of the property is developed with one open-air canopy structure, approximately 38,400 sf in size, which was built in the early 1970s. One mobile office is located in the western portion of the Site and occupied by AmCo Structures. There are three mobile home residences located onsite – one in the southwest area, one in the central southern area, and one in the southeast area. Landscaping is located in the central southern portion of the Site.

Interior Observations - The onsite open-air canopy structure has been used as a spray booth since the early 1990s. The open-air canopy structure in the central portion of the Site is used for the manufacturing of mobile structures. The interior portions of the onsite mobile residences were not observed as part of the Site reconnaissance.

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

Several containers of hazardous substances, primarily motor oil, hydraulic oil, batteries, diesel fuel, and paints and ranging from 1-quart to 5 gallons in size, were observed in the south-central portion of the Site in the area in which a diesel mechanic operates. A few small areas of the surface staining, limited in lateral and vertical extent, were observed on the gravel surface beneath the containers. These stained areas are *de minimis*.

A pallet of paint containers, ranging from 1-quart to 5 gallons in size, were observed to the south of the open-air structure in the central portion of the Site. No staining or leaks indicative of a release were observed beneath the containers.

Several containers of hazardous substances, primarily motor oil and hydraulic oil and ranging from 1-quart to 5 gallons in size, were observed in the northeastern portion of the Site in the area in which a mechanic operates. A few small areas of the surface staining, limited in lateral and vertical extent, were observed on the asphalt surface beneath the containers. These stained areas are *de minimis*.

Several containers of hazardous substances, primarily paint and paint thinner and ranging from 1-quart to 5 gallons in size and one 2,150-pound tote of Reynco 1858-R WP Coating, were observed in the southeastern portion of the Site in the location of the current spray paint booth. Significant, black staining was observed on the asphalt surface of the spray paint booth. The asphalt surface was also heavily damaged, likely from the use of chemicals. This area of the Site was assessed during our Phase II ESA presented in Section 7.0 and determined to not be a REC.

5.3.2 Storage Tanks

Evidence of USTs, such as vent lines, fill or overfill ports, was not observed on the Site.

One 345-gallon steel aboveground storage tank (AST) was observed along the eastern boundary of the Site. The contents of the AST are unknown and it is believed to be empty. If the AST contains any fluid, the likely substance is waste oil or diesel fuel. No staining or leaks indicative of a release were observed beneath the AST.

Several propane tanks were observed throughout the Site and are associated with both the residential structure and businesses that operate onsite. These tanks are not considered a REC.

5.3.3 Polychlorinated Biphenyls (PCBs)

One pad-mounted transformer was observed along the southwest side of the central open-air structure. No leaking or staining was observed on the concrete near the base of the transformer. It is unlikely that this pad-mounted transformer holds PCB-containing oil.

5.3.4 Waste Disposal

Waste bins for the collection of general waste and recycling are stored throughout the Site.

5.3.5 Dumping

No evidence of dumping was observed onsite.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, ponds, lagoons, wastewater, drains, cisterns, and sumps was not observed on the Site.

One septic tank is located in the southwest corner of the Site and connected to the mobile office structure used by AmCo. It is possible that the three onsite residences are also connected to septic tanks; however, the presence and location of these potential tanks is unknown.

5.3.7 Pesticide Use

Evidence of pesticide use was not observed on the Site.

5.3.8 Staining, Discolored Soils and Corrosion

Dark staining is observed throughout the flooring of the spray paint booth, extending out to the entrance on the west side of the booth. The asphalt and/or concrete flooring of the spray paint booth area is very weathered and contains numerous cracks. Additionally, what appears to be a former spray

paint booth, based on aerial photo review, in the northeast corner of the Site, there is observed black staining that is similar to the staining in the vicinity of the current spray booth. This area of the Site was assessed during our Phase II ESA presented in Section 7.0 and determined to not be a REC.

5.3.9 Stressed Vegetation

Evidence of stressed vegetation was not observed on the Site.

5.3.10 Unusual Odors

No unusual odors were observed on the Site.

5.3.11 Onsite Wells

No wells were observed on the Site.

5.3.12 Other Observations

No other observations of environmental concern were noted during our Site reconnaissance.

6.0 INTERVIEWS

Leighton conducted interviews with persons having knowledge of current or past Site usage when possible. Interviews were conducted either orally or in the form of a written questionnaire. Copies of completed interview forms, if any, are included in **Appendix C**.

6.1 Interview with Owner

As of the date of this report, a completed Owner Interview form has not been received by Leighton.

6.2 Interview with Property Manager

The current property manager was not interviewed as part of this Phase I ESA.

6.3 Interviews with Occupants

Employees of the onsite business were not interviewed as part of this Phase I ESA.

6.4 Interviews with Local Government Officials

Leighton did not interview employees with local government agencies to request information regarding historic and current uses of the Site with the exception of those noted in Section 4.2.3.

6.5 Interviews with Others

Leighton did not conduct additional interviews for this Phase I ESA.

7.0 PHASE II ESA

On February 8, 9, and 11, 2023 Leighton completed a Phase II ESA to determine if the past and present uses of the Site, (i.e. mechanics, spray booths, and a former UST), had resulted in the release of heavy metals, total petroleum hydrocarbons (TPH), and/or volatile organic compounds (VOCs) to the subsurface soil and/or soil gas that could present a risk to the existing and/or future occupants of the Site.

The scope of work for the Phase II ESA is described below.

7.1 Pre-Field Activities

Health and Safety Plan

Leighton prepared a site-specific Health and Safety Plan (HSP) for the fieldwork to be performed. The HSP documented the safety aspects of the work and complied with Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1910.120. The HSP was onsite with Leighton personnel at all times. The HSP outlined all site procedures, potential hazards, and contained a hospital location map. All onsite Leighton personnel acknowledged acceptance of the plan by signing the HSP.

Utility Clearance

Leighton notified Dig Alert (811) a minimum of 72 hours prior to starting subsurface intrusive work.

7.2 Geophysical Survey

On February 8, 2023, a geophysical survey was completed by Spectrum-Geophysics of North Hollywood, California in an attempt to locate underground features associated with the former UST to determine if residual soil or soil gas impacts are present onsite as a result of a release of fuel from the UST. The geophysical survey was completed in the eastern portion of the Site, where the former UST may have been located based on SBCFD records. The geophysical survey was limited by large metal equipment, vehicles, and structures located in this portion of the Site. No evidence of a UST, UST excavation pit, or other features, was discovered.

7.3 Soil Sampling

On February 8 and 9, 2023, Leighton oversaw the advancement of 14 soil borings to a total depth of 15 feet bgs. All locations were cleared to 5 feet bgs using a hand auger prior to drilling. The borings were then completed to the total depth of 15 feet bgs using truck-mounted direct-push drilling equipment with an approximate 2.25-inch outer diameter drive rod operated by JHA Remediation, LLC (JHA) of Irvine, California. JHA is a State of California licensed drilling contractor. The 14 borings, designated as ENV1 through ENV14, are shown on the attached **Figure 3, Boring Location Map**.

Soil samples were collected from each boring at depths of 0.5, 2.5, 5, 10, and 15 feet bgs and were retained in 6-inch acetate sleeves, capped with Teflon paper and plastic end caps, or 8-ounce laboratory supplied glass jars. The containers were clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported to Jones Environmental, Inc. (Jones), a National Environmental Laboratory Accreditation Program (NELAP)-certified laboratory, for chemical analysis. The chain-of-custody protocol was followed throughout all phases of the sample handling process.

Soil samples were logged and described under direct supervision of the California Professional Geologist. At a minimum, soil descriptions included the Unified Soil Classification System name, color, density, moisture content, grain size, and if staining or chemical odors were detected if applicable. The soils observed generally consisted of silty sands, sandy silts, and clayey sands. No trash and/or staining was observed in the soil samples observed.

Each soil sample was field screened using a photoionization detector (PID) to evaluate the soil sample for the presence of volatile organic hydrocarbon vapors. PID readings were obtained by placing an aliquot of soil, collected adjacent from the portion retained for chemical analysis, into a clean bag, and then placing it in the sun or warm area for 5 to 10 minutes. The reading was then collected from the headspace of the plastic bag by entering the tip of the PID. PID concentrations were only observed in select soil samples collected at 0.5-feet bgs and were observed at concentrations between 0.8 parts per million (ppm) to a maximum of 197.7 ppm. The maximum concentration detected of 197.7 ppm was observed in soil sample ENV1-0.5.

Down-hole sampling and drilling equipment was decontaminated between

boreholes by washing in a solution of non-phosphate detergent and water, rinsing with potable water, final rinsing with distilled water and allowed to air-dry.

Borings not converted into soil gas probes (described below) were backfilled with hydrated bentonite to the surface. Soil cuttings generated as part of this investigation were contained within 55-gallon Department of Transportation approved drums and properly disposed offsite.

Soil boring locations were accurately measured to a fixed reference point, noted on field maps, and surveyed using a Trimble Geo7X Mobile Global Positioning System (GPS) unit. The Trimble GPS unit provides the latitude and longitude of each boring within 3 feet.

7.4 Soil Vapor Gas Probe Installation and Sampling

Soil Vapor Gas Probe Installations

On February 8 and 9, 2023, nine (9) of the 14 borings discussed above and shown on **Figure 2** (ENV1, ENV3, ENV7 through ENV11, ENV13 and ENV14), were converted to nested soil gas sampling points at the following depths:

Boring ID	Probe Depths
ENV1	5 and 14 feet bgs
ENV3	5 and 15 feet bgs
ENV7	5 and 15 feet bgs
ENV8	5 and 14 feet bgs
ENV9	5 and 14 feet bgs
ENV10	5 and 15 feet bgs
ENV11	5 and 15 feet bgs
ENV13	5 and 14 feet bgs
ENV14	5 and 15 feet bgs

The soil gas probes consisted of inert ¼-inch nylaflow tubing fitted with a porous airstone at the terminus, which were set within one foot of sand, one foot of dry bentonite above, followed by hydrated bentonite to the next sand pack/nested probe depth or ground surface. This procedure was followed for the multiple probe depths, in that one foot of dry granular bentonite was emplaced on top of the sand pack encasing each probe, followed by hydrated bentonite. The surface end of the probe was fitted with a gas-tight leurlock to prevent infiltration of water or air and

was coiled within a foot of sand to protect the probes until sampled. Soil gas probes were allowed to equilibrate for a minimum of 48 hours prior to sampling.

Soil Vapor Gas Probe Sampling

On February 11, 2023, Leighton oversaw the collection and analysis of soil gas sampling from nine locations (ENV1, ENV3, ENV7 through ENV11, ENV13 and ENV14). The sampling and analysis of the soil gas samples was completed in a mobile laboratory operated by Jones. Chain of custody (CoC) protocol was followed through all phases of the sample handling process.

Prior to purging or sampling, a magnhelic gauge was utilized to check the probe tubing for pressure. Pressure readings were reported on the CoC. A shut-in test was conducted along the sampling train setup at each sampling depth and location, prior to purging each probe. If a leak was detected, the sampling train was reset and adjusted until no leaks were detected. At each sampling location an electric vacuum pump (set to draw 0.200 liters/min of soil vapor at a maximum vacuum of 100-inch of water) was attached to the probe and purged prior to sample collection. A default 3 purge volumes were removed from the soil gas probe prior to sampling. Soil gas samples were obtained by drawing the sample through a luerlock connection which connects the sampling probe to the sample container.

A tracer gas was applied to the soil gas probes at each point of connection in which ambient air could enter the sampling system. These points included the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. If the tracer gas was detected, the source of the leak was identified, corrected, and the probe was resampled. Tracer gas was not detected in the samples collected during this investigation.

7.5 Laboratory Analyses

Soil Samples

Soil samples collected on February 8 and 9, 2023 were analyzed for the following constituents:

- Soil samples collected from 0.5 and 5.0 feet bgs were analyzed for TPH as diesel and oil by EPA Method 8015M and TPH as gasoline and VOCs by EPA Method 8260B; and

- Soil samples collected from 0.5 and 2.5 feet bgs were analyzed for Title 22 Metals by EPA Methods 6010B/7471A.

Those samples not initially analyzed were placed on hold at the receiving laboratory for potential analysis based on the results of the initial samples.

Soil Gas Samples

Soil gas samples collected on February 11, 2023, were immediately injected into an onsite mobile laboratory gas chromatograph/purge and trap system, operated by Jones after collection. Each soil gas sample, including the duplicate, was analyzed for the tracer gas and VOCs by modified EPA Method 8260B.

7.6 Analytical Results

7.6.1 Soil Sample Laboratory Results

The soil analytical results were compared to one or more of the following regulatory screening criteria:

- EPA Regional Screening Levels (RSLs) for residential and industrial soil (November 2022);
- DTSC Office of Human and Ecological Risk (HERO) Note Number 3 Modified Screening Levels (DTSC-SL) for residential and industrial soil (May 2022);
- San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (SFBRWQCB ESLs) for residential and industrial land use, shallow soil exposure scenario (January 2019, rev. 2); and
- The DTSC Southern California Ambient Arsenic Screening Level (December 2020) of 12 milligrams per kilogram (mg/kg).

The laboratory results of the soil samples are summarized below and are presented in **Tables 1 and 2**. A copy of the laboratory report is presented in **Appendix H**.

- TPH in the C_4-C_{12} carbon range (gasoline), TPHg, was detected in only one soil sample, ENV1-0.5, at a concentration of 1.22 mg/kg. This detection is below the ESLs for residential and/or industrial land use (see **Table 2**).

- TPH in the C_{13}-C_{22} carbon range (diesel), TPHd, was detected in 10 of the 28 soil samples analyzed at concentrations between 18.4 mg/kg to 271 mg/kg. One soil sample, sample ENV12-0.5, contained TPHd at a concentration of 271 mg/kg, which is below the ESL for industrial land use (see **Table 2**). It should be noted that TPHd was detected in each soil sample collected at 0.5 feet bgs. These soil samples were collected directly beneath degraded asphalt. The elevated concentrations of TPHd observed in these samples, including sample ENV12-0.5, are likely a result of the degraded asphalt and are not considered a concern.

- TPH in the C_{23}-C_{40} carbon range (oil), TPHo was detected in 10 of the 28 soil samples analyzed at concentrations between 131 to 3,291 mg/kg. The reported detections were below the ESLs for residential and industrial land use (see **Table 2**).

- Title 22 metals with detections were reported at concentrations below the USEPA RSLs, DTSC-SLs for soil in a residential and/or industrial land use with the exception of arsenic and/or lead.

    - Arsenic was not detected in the soil samples analyzed at a concentration above the Ambient Arsenic Screening Level for southern California of 12 mg/kg. Arsenic is not considered a contaminant of concern.

    - Lead was detected in each of the soil samples analyzed at concentrations between 2.1 mg/kg to 260 mg/kg. The detected concentrations are below the DTSC-SL for industrial land use. The highest lead concentrations were detected in 0.5 feet bgs samples and concentrations significantly decreased in the samples collected and analyzed from 2.5 feet bgs. The lateral and vertical extent of lead-impacted soil exceeding the unrestricted land use DSTC-SL of 80 mg/kg is limited and would not trigger regulatory action.

- Various VOC compounds were detected in seven of the 27 soil samples analyzed. None of the reported concentrations of VOCs exceeded their respective screening levels for residential and industrial land use scenario (see **Table 2**).

7.6.2 Soil Gas Laboratory Results

Results of the chemical analyses of the soil gas samples were compared to the EPA Regional Screening Levels (RSLs) for industrial air (November 2022) and the DTSC Human Health Risk Assessment (HERO) Note Numbers 3 and 5 Screening Levels for Industrial Air (June 2020, updated May 2022, and August 2014, respectively). These indoor air screening levels were adjusted assuming a slab attenuation factor of 0.0005 for future commercial/industrial buildings according to Table 2 of the DTSC 2011 Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air. Additionally, a more conservative slab attenuation factor of 0.03 was also evaluated as presented in the Final Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion issued by the DTSC in February 2023. The draft slab attenuation factor of 0.03 is used for screening purposes only and is not intended to be used to determine the need for mitigation or remediation. Conclusions drawn from the results of the soil gas analysis were based on the currently accepted slab attenuation factor of 0.0005.

The laboratory results of the soil gas samples are summarized below and are presented in **Table 3**. A copy of the laboratory report is presented in **Appendix H**.

Eighteen (18) VOCs were detected above the laboratory reporting limits in the soil gas samples selected for analysis during this investigation. The maximum concentrations of VOCs detected in soil gas are presented below:

VOC	Maximum Concentration	Sample ID
Benzene	29 µg/m^3	ENV-11-5 REP
DCA	103 µg/m^3	ENV-13-15
DCE	883 µg/m^3	ENV-13-15
Ethylbenzene	238 µg/m^3	ENV-9-15
Freon 113	39 µg/m^3	ENV-13-5
Isopropylbenzene	14 µg/m^3	ENV-9-5
4-Isopropyltoluene	56 µg/m^3	ENV-13-5
Methylene Chloride	12 µg/m^3	ENV-11-15
n-Propylbenzene	12 µg/m^3	ENV-13-15
Styrene	8 µg/m^3	ENV-1-5
PCE	656 µg/m^3	ENV-13-15
Toluene	997 µg/m^3	ENV-11-15
TCA	16,500 µg/m^3	ENV-13-5
TCE	12 µg/m^3	ENV-8-15
m,p-Xylenes	1,130 µg/m^3	ENV-9-15
o-Xylenes	60 µg/m^3	ENV-9-15
1,2,4-Trimethylbenzene	82 µg/m^3	ENV-13-15
1,3,5-Trimethylbenzene	46 µg/m^3	ENV-13-15

µg/m^3 = micrograms per cubic meter

The concentrations of the detected VOCs did not exceed their respective industrial screening limits using the currently accepted attenuation factor of 0.0005 for future commercial/industrial buildings. A few VOCs, such as benzene and PCE, exceed the current and proposed residential screening limits; however, it is our understanding that the mobile homes located onsite will be vacated upon Rexford's ownership of the property and that the Site will be used only for commercial/industrial purposes. Given this information, the residential screening limits are not relevant to Rexford's use of the Site. Furthermore, the exceedances of residential screening limits would not likely trigger regulatory action and are considered a *de minimis* condition.

8.0 FINDINGS

Leighton performed a Phase I ESA of the property located at 13925 Benson Avenue in the city of Chino, San Bernardino County, California (Site – Figure 1) in accordance with the authorization of Rexford.

8.1 Onsite

The Site was agricultural land (primarily grain fields) from at least 1938 until approximately 1972, when the Site was redeveloped for commercial/industrial use.

Currently, the Site is an approximate 6.62-acre parcel that is occupied by AmCo Structures, a modular building and housing design and build company. The Site is developed with one open-air canopy structure, approximately 38,400 sf in size, which was built in 1972. One mobile office is located in the western portion of the Site and occupied by AmCo Structures. There are three mobile home residences located onsite – one in the southwest area, one in the center south area, and one in the southeast area. The center south portion is leased by a diesel mechanic who conducts maintenance on construction equipment and semi-trucks. Another vehicle mechanic operates in the northeast portion of the Site. The Site is largely paved with asphalt with the exception of a landscaped and gravel area located in the southern portion of the Site.

The EDR database report identified the Site as being historically occupied by several commercial/industrial businesses that may have used, stored, and/or disposed of hazardous substances.

A request for records to the SBCFD revealed that the Site was listed in the CERS database for hazardous waste management including several gallons of paint, paint waste, an aboveground petroleum tank, and a compressed air tank. Records also revealed that a 1,000-gallon gasoline UST was removed from the Site in February 1990. It appears that one soil sample was collected during the tank removal; however, the SBCFD did not have a file that contained lab data nor a formal closure letter. A hand-drawn map in the SBCFD files placed the tank in the eastern portion of the Site; however, the exact location is unknown. The SBCFD also held records of a spray paint booth onsite and included a complaint for “paint getting on cars located on an adjacent building” filed in 1989 regarding operation of the booth. Additionally, a spray paint booth with visible staining was observed in the southeast portion of the Site during the Site reconnaissance. There were no investigation or remediation records for the Site within the SBCFD files. Given the

SBCFD records revealed a former UST was associated with the eastern portion of the Site, the absence of records documenting a formal closure with lab data to confirm a subsurface soil assessment, and documents indicating the presence of a former spray paint booth, these records were considered a potential REC associated with the Site. Additionally, a spray paint booth with visible staining was observed during the Site reconnaissance, which was also considered a potential REC associated with the Site.

To address the concerns discussed above, a Phase II ESA was completed in conjunction with this Phase I ESA to determine if the past and present uses of the Site, (i.e. mechanics, spray booths, and a former UST), had resulted in the release of heavy metals, TPH, and/or VOCs to the subsurface soil and/or soil gas that could present a risk to the existing and/or future occupants of the Site.

A geophysical survey was completed in the eastern portion of the Site in an attempt to locate the former UST or UST excavation pit. The geophysical survey was limited by large metal equipment, vehicles, and structures located in this portion of the Site. No evidence of a UST, UST excavation pit, or other features, was discovered; however, low concentrations of TPHg and several gasoline component VOCs were detected in shallow soil samples collected from boring ENV1 in the northeast portion of the Site. Although these constituents were detected at concentrations below regulatory screening levels, their presence may be associated with the former UST.

Based on the results of our subsurface soil assessment, concentrations of TPH, Title 22 metals, and VOCs detected in the soil at the Site are below regulatory screening limits for residential and industrial properties, with the exception of near surface concentrations of TPHd and two detections of lead. The detection of TPHd can be attributed to the degraded asphalt surface and do not present a concern to the present and/or future occupants of the Site. Two soil samples, ENV14-0.5 and ENV5-0.5, were reported to contain lead at concentrations of 83.6 milligrams per kilogram (mg/kg) and 260 mg/kg, respectively. These detections are below industrial use screening limits; however, they do exceed the DTSC-SL of 80 mg/kg for unrestricted land use. The unrestricted land use screening level is not applicable to this Site, as it is intended for commercial/industrial use only. Furthermore, the soil samples collected at the deeper depth of 2.5 feet bgs in locations ENV5 and ENV14 contained lead at concentrations below the DTSC-SL of 80 mg/kg. The lateral and vertical extent of the lead-impacted soil is limited and

would not trigger regulatory action. TPHd and lead impacted soil is considered a *de minimis* condition and not a REC.

Based on the results of our soil gas assessment, concentrations of VOCs detected in soil gas beneath the Site are below regulatory screening limits for existing and proposed commercial/industrial properties and do not present a vapor intrusion concern to the present and/or future occupants of the Site. It is our understanding that the mobile homes onsite will be vacated upon Rexford's ownership of the property, and that the Site will be used only for commercial/industrial purposes.

8.2 Offsite

Historically, the surrounding properties consisted primarily of agricultural land from at least 1938 untill the mid-1960s, when the surrounding area started to be redeveloped for industrial/commerical use.

Currently, the surrounding properties consist of commercial/industrial businesses to the north, west, east, and south of the Site.

Two notable offsite facilities were identified within the Envirostor database and include Southern California Edison which is located on the southern adjacent property and RMS Finishing, Inc., which is located on the northern adjacent property.

- Southern California Edison (SCE) is listed with a cleanup status of NFA as of 10/28/1997 for PAHs, arsenic, and other solvent impacted soils (see section 4.2.3). SCE was also listed in the EDR database report under various database listings which were largely for hazardous waste management activities (see section 4.2.2). Given the agency NFA designation for this facility, and its down-gradient location to the Site, it is Leighton's opinion that this offsite listing does not have the potential to adversely affect the Site.

- RMS is listed with a cleanup status of "NFA" as of 05/18/2011 for metal impacted soils. RMS is also listed in the EDR database report under various database listings which were largely for hazardous waste management activities (see Section 4.2.2). Given the agency NFA designation for this facility, it is Leighton's opinion that this offsite listing does not have the potential to adversely affect the Site.

One notable offsite facility was identified within the Geotracker database as American Eagle Wheel, which is located on the northwestern adjacent property. American Eagle Wheel is listed with a cleanup status of Open – Site Assessments as of 01/01/2019 for VOC impacted soils, soil vapor, and groundwater. American Eagle Wheel is also listed in the EDR database report under various database listings for hazardous waste management, hazardous air pollutants, and storing and using waste oil and other chemicals (see Section 4.2.2). Based on information available for review regarding the offsite release, it appears that the area of concern largely encompasses the eastern portion of the offsite property and based on the most recent groundwater monitoring report issued in April 2021 indicating a groundwater flow direction to the southeast (Geotracker, 2023), it is Leighton's opinion that this offsite listing does not have the potential to adversely affect the Site. Additionally, the results of our Phase II ESA did not identify significant concentrations of the VOCs in soil gas in the northeast corner of the Site, the area closest to the offsite American Eagle Wheel property.

Other offsite properties of environmental concern were not identified.

8.3 Data Gaps

Leighton has identified the following data gap:

- A completed Owner Interview form has not been received by Leighton. This is not a significant data gap.

If information is obtained at a later date that alters the conclusions and recommendations of this report, an addendum to this report will be prepared.

9.0 OPINION

9.1 Onsite

It is Leighton's opinion no RECs, CRECs, or HRECs were identified at the Site.

Lead has been detected in two shallow soils collected from the southern portion of the Site at concentrations exceeding the unrestricted land use DTSC-SL of 80 mg/kg. The lateral and vertical extent of the lead impacted soil is limited, would not trigger regulatory action, and considered a *de minimis* condition; however, a Soil Management Plan should be prepared and implemented to address encountering and properly handling lead impacted soil during redevelopment of the Site.

A few VOCs in soil gas, such as benzene and PCE, exceed the current and proposed residential screening limits; however, it is our understanding that the mobile homes located onsite will be vacated upon Rexford's ownership of the property and that the Site will be used only for commercial/industrial purposes. Given this information, the residential screening limits are not relevant to Rexford's use of the Site. Furthermore, the exceedances of residential screening limits would not likely trigger regulatory action and are considered a *de minimis* condition.

9.2 Offsite

It is Leighton's opinion that no environmental conditions on offsite properties represent RECs, HRECs, or CRECs to the Site.

10.0 CONCLUSIONS AND RECOMMENDATIONS

Leighton has performed a Phase I and Phase II ESA in conformance with the scope and limitations of ASTM Standard E1527-21 of the property located at 13925 Benson Avenue in the city of Chino, San Bernardino County, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of RECs in connection with the Site.

No CRECs, HRECs, or business environmental risks were identified in connection with the Site.

Based on the findings of this Phase I and Phase II ESA, Leighton recommends the following:

- Preparation of a Soil Management Plan to address known and potentially impacted soils that may be encountered during future assessment or redevelopment work.

11.0 DEVIATIONS

Leighton did not deviate from or alter the scope of work, as defined in Section 1.3 of this report. Significant data gaps were not identified.

12.0 ADDITIONAL SERVICES

Leighton did not perform work outside the scope of work as defined in Section 1.3 of this report.

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

13.1 Corporate

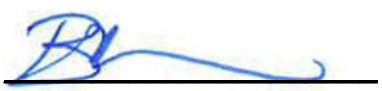

Leighton is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our office locations in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I and Phase II ESAs are a part of this practice area and have been conducted by us.

13.2 Individual

The qualifications of the Brynn McCulloch, Principal Geologist, and the other Leighton environmental professionals involved in this Phase I ESA meet the Leighton corporate requirements for performing Phase I ESAs as specified by ASTM Standard E1527-21. In addition, Brynn McCulloch is a Professional Geologist (PG).

13.3 Environmental Professional Statement

I declare on March 6, 2023, that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional, as defined by §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Brynn McCulloch, PG
Principal Geologist

Note:
USEPA RSL = Environmental Protection Agency Regional Screening Levels (RSLs) for residential soil (November 2022)
DTSC-SL = Department of Toxic Substances Control (DTSC) residential Screening Level (SL), Office of Human and Ecological Risk (HERO) Note Number 3 (May 2022)
* DTSC Determination of a Southern California Regional Background Arsenic Concentration in Soil (DTSC, 2020)
mg/kg = Milligrams per Kilogram
-- = Not applicable or not analyzed
<0.5 = Analyte not detected above the referenced detection limit
Red values exceed one or more screening level

Note:

USEPA RSL = Environmental Protection Agency Regional Screening Levels (RSLs) for residential soil (November 2022)
DTSC-SL = Department of Toxic Substances Control (DTSC) residential Screening Level (SL), Office of Human and Ecological Risk (HERO) Note Number 3 (May 2022)
ESL = San Francisco Regional Water Quality Control Board Environmental Screening Level (ESL) Residential Direct Soil Exposure (January 2019)
VOCs = Volatile Organic Compounds
TPH = Total Petroleum Hydrocarbons as gasoline (TPHg), diesel (TPHd), and oil (TPHo)
mg/kg = Miligram per Kilogram
ug/kg = Micrograms per Kilogram
-- = Not applicable/used or not analyzed
J = Estimated value between the method detection limit and laboratory reporting limit
<1.0 = Analyte not detected above the referenced detection limit as shown
ND = Analyte not detected above the referenced detection limit
* = Aliphatic/aromatic TPH RSL
Red values exceed one or more screening level

TABLE 3
Soil Gas Analytical Results for VOCs
13925 Benson Avenue, Chino, California

Boring ID	Sample ID	Probe Depth (feet bgs)	Date	Volatile Organic Compounds (VOCs) by EPA Method 8260 (µg/m3)

Note:

16 = A bold number indicates that the chemical compound has exceeded the laboratory report limit.

bgs: below ground surface

µg/m3: micrograms per meter cubed

<8: Not detected above the laboratory detection limit

USEPA RSLs = Environmental Protection Agency Regional Screening Levels (RSLs) for industrial indoor air (November 2022)

DTSC HERO Note 3/5 = Department of Toxic Substances Control (DTSC) Office of Human and Ecological Risk (HERO) Note Number 3 (May 2022) and Note Number 5 (August 2014)

AF = Attenuation factor for existing commercial/industrial structures. Indoor air screening level is divided by the AF to obtain the soil vapor screening level (DTSC, 2011)

Highlighted concentrations exceed one or more regulatory screeing limits

Phase I ESA Users Questionnaire

Project Name: 13925 Benson Ave

Complete and Correct Address(es) of the Property and APN(s):

13925 Benson Ave, Chino CA 91710 (APN: 1021-211-02-0000)

User Company Name:	**User Name/Title:**
Rexford Industrial	Corey Guerrero, Due Diligence Analyst

User Phone/Email: (310) 492-5488; cguerrero@rexfordindustrial.com

Interviewee Name and Relationship to Project:

James Hwang, Assistant V.P. Acquisitions; Potential Owner

Site Owner: Rick Martin, Trustee of the Leon O. Martin Revocable Trust Dated July 29, 2

Reason Phase I is required:

Property acquisition

Type of property:

Industrial

Type of property transaction (e.g., Sale, purchase, exchange):

Purchase

Any scope of services beyond the ASTM Practice E 1527:

All Parties that will rely on the Phase I report:

Name and Contact Information for Site Contact:

Any special terms or conditions:

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

DocuSign Envelope ID: 486AAC6F-833E-417B-A8F2-CF6E116266CC

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ■ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? ☐ Yes | ■ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☐ Yes | ■ No

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

■ Yes | ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ Yes | ☐ No

If Yes, Describe:

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? ☐ Yes | ☑ No

(b.) Do you know of specific chemicals that are present or once were present at the property? ☐ Yes | ☑ No

(c.) Do you know of spills or other chemical releases that have taken place at the property? ☐ Yes | ☑ No

(d.) Do you know of any environmental cleanups that have taken place at the property? ☐ Yes | ☑ No

If Yes, Describe:

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property?* ☐ Yes | ■ No

If Yes, Describe:

James Hwang

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LUST ---- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/24/2022 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 28 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 5 PFAS ECHO sites within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2021 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: FA0013600

CIWQS: The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

A review of the CIWQS list, as provided by EDR, and dated 08/16/2022 has revealed that there are 3 CIWQS sites within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/05/2023 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
HAZARDOUS AIR POLLUTANT MAJOR

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	10/28/1997
Comments:	DTSC approved the submitted Baseline Health Risk Assessment (BHRA).

EDISON/CHINO (Continued) **S103393800**

The BHRA documented hazardous substances characteri- zation and assessed the site for risk posed to onsite workers and offsite residents. DTSC reviewed the BHRA under a Voluntary Cleanup Agreement (VCA). Based on the information and data prese in the BHRA, DTSC determined that hazardous constituents re- maining at the site do not pose a threat to human health or the environment. The review and comment constituted completion of the VCA.

Completed Area Name: PROJECT WIDE

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D008
Waste Description: LEAD

Waste Code: D018

SOUTHERN CALIFORNIA EDISON CHINO SUBSTATION (Continued) **1000921623**

Waste Description: BENZENE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation:	HSC 6.5 25201.16(f) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.16(f)
Violation Description:	Failure to comply with the applicable requirements related to accumulation and containment standards for universal waste aerosol cans.
Violation Notes:	Returned to compliance on 07/28/2021. It was found that the facility is puncturing aerosol cans. There is a department notification that is required when conducting this activity that was not submitted. When an aerosol can is punctured the resulting waste is a RCRA hazardous waste and must be labeled with a hazardous waste label and manifested as a hazardous waste. There are two options when managing waste aerosol cans. Option 1. The aerosol cans can be punctured using your current equipment. The resulting waste must be labeled as hazardous waste and must be clearly marked with an accumulation start date. The start date would be the day the first aerosol is punctured and drained into an empty drum. The accumulation time limit will be 180 days at which time the drum must be removed from the facility using a hazardous waste manifest. Health and Safety Code section 25201.16(j) requires you to notify your local CUPA if you process universal waste aerosol cans. Universal Waste handlers can process the cans [Truncated]

Environmental Interest/Information System:

RMS FINISHING INC (Continued) **1004676296**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RISK AND TECHNOLOGY REVIEW
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description:	RP states that a fire in the dust collector caused the release of recovered product with the fire fighting water. The dust collector is approximately 10' X 10' X 4' and contained filters. The majority of the filters and polishing compounds remained on site. It is unknown how much product entered the storm drain. The storm drain was protected with booms to help filter out the larger particles.

Lead Agency: SANTA ANA RWQCB (REGION 8)
Lead Agency Case Number: Not reported
Latitude: 34.00203
Longitude: -117.67854
Case Type: Cleanup Program Site
Case Worker: MSA
Local Agency: Not reported
RB Case Number: 2080172
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Dichloroethane (DCA), Dichloroethene (DCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium VI
Site History: In August 2016, EFI Global, Inc. (EFI) conducted a Phase I Environmental ESA at the Subject Property and identified several recognized environmental conditions (RECs) related to the use of the facility for wheel manufacturing and the use of chlorinated solvents and various other chemicals. None of the RECs were due to identified

AMERICAN EAGLE WHEEL (Continued) **S121476021**

releases at the site. In August and September 2016, Partner Engineering and Science, Inc. (Partner) conducted a Phase II subsurface investigation at the Subject Property to evaluate the RECs identified by EFI (Partner, 2016). The Phase II investigation found little to no VOCs in soil samples collected, except at one location, B16, located at the eastern side of the site. At B16, little to no VOCs were detected in soil in the upper 35 feet; however, 1,1-dichloroethene (1,1-DCE), tetrachloroethene (PCE), and trichloroethene (TCE) were encountered from 40 to 60 feet bgs. Partner also collected soil vapor samples throughout the Subject Property during their investigation. Soil vapor samples indicated relatively low levels of petroleum hydrocarbons near the southwest corner of the property (B1, B2, and B3). Chlorinated VOCs, primarily 1,1-dichloroethane (1,1-DCA), 1,1-DCE, PCE, and TCE were detected near the mid-eastern portion of the Subject Property. Based upon the results from the single boring where multi-depth vapor probes were installed, VOC vapors appear to increase at depth with the maximum concentrations occurring at 40 feet bgs. In February and March 2017, EEC conducted a historical document review to assess the environmental conditions of the Subject Property and to identify the history and past operations at the Subject Property and adjoining properties. The historical review was performed to evaluate if regulatory files contained evidence that past operations at the Subject Property and/or adjoining properties may have negatively impacted the current condition of the Subject Property, and/or have possibly contributed to the VOCs in soil and soil vapor at the Subject Property. In May 2017, EEC conducted a Phase I ESA at the Subject Property and identified RECs related to the use of the facility for wheel manufacturing and RECs associated with off-site properties (EEC, 2016). The RECs identified included the former use as a wheel manufacturing facility, the use and storage of hazardous materials such as 1,1,1-trichloroethane (TCA), and VOC-impacted soil and soil vapor identified by Partner (Partner, 2016). Areas of concern included the hazardous materials storage area and the east half of the breezeway, which includes the sump, washline, and grinding room. In addition, off-site RECs were also identified, which included the RV service facility at 13788 Oaks Avenue (east adjoining property); the plastic injection molding facility and former plumbing fixtures manufacturer at 13818 Oaks Avenue (east adjoining property); and the concrete pumps manufacturer and former zinc galvanizing and metal fabrication facilities at 13822 Oaks Avenue (east adjoining property). Several of the off-site facilities had documented use of various hazardous substances, including solvents, such as 1,1,1-TCA. McBrides Service & Supply operated at 13788 Oaks Avenue since approximately 1990, performing service on RVs. Site operations involved the use and storage of cleaning solvents (including 1,1,1-TCA) and petroleum hydrocarbons such as gasoline, oil, and diesel fuel. The San Bernardino County Fire Department (SBCFD) observed a heavy accumulation of waste oil on the ground and identified oily soil near a tipped over parts washer. The facility was directed to remove contaminated soil from the site. This facility addressed as 13818 Oaks Avenue has operated since approximately 1980, performing plastic injection molding. Additionally, plumbing fixtures manufacturing was conducted at the site from at least 1980 to 1988 (SBCFD files) and possibly until 2013 (city directories). Site operations involved the use and storage of cutting oils, coolant, cleaning solvents, and petroleum hydrocarbons such as gasoline and

AMERICAN EAGLE WHEEL (Continued) **S121476021**

kerosene. The SBCFD reported leakage of oily waste was observed on the ground near a waste oil tank. The facility used up to eight parts washers and heavy-duty degreaser in a water-cleaning tank. Two 6,000-gallon gallon gasoline USTs were removed from the property in 1997 and No Further Action was issued based on low concentrations of petroleum hydrocarbons detected in soil. This facility began operating in 1980, conducting zinc galvanizing. From approximately 1985 to 1992, the property was occupied by a metal fabricator and from approximately 1993 to present, the property has been occupied by a concrete pumps manufacturer. Site operations involved the use and storage of acids, solvents (including 1,1,1-TCA), oils, and paints. Contaminated soil was observed next to a waste oil tank. The site utilized up to four parts washers and a 960-gallon paint dip tank. A submerged storage tank was previously located inside the building and an open disposal pit was previously located outside (1980 to 1984). The site later used a clarifier, which may still be in use. A soil sample collected from a soil pile in the facility yard detected low levels of PCE in the soil. Site Assessment Report 5780 Soestern Court (EEC Environmental, 2017)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

COBURN EQUIPMENT (Continued) **S104765409**

Site Name:	Coburn Equipment
Violation Date:	04-11-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 04/11/2019. OBSERVATION: Facility failed to annually submit a complete business plan in CERS. Last submittal dated 08/09/2018. CORRECTED ON SITE: Facility submitted a complete business plan in CERS at the time of inspection.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	107184
Site Name:	Coburn Equipment
Violation Date:	04-11-2019
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 04/11/2019. OBSERVATION: (1) 55 gallon drum of drained used oil filters was missing a label. CORRECTED ON SITE: The drum mentioned above was properly labeled during the inspection.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	107184
Site Name:	Coburn Equipment
Violation Date:	04-25-2022
Citation:	HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	OBSERVATION: At the time of the inspection, observed (2) 3,000-gallon tanks of new motor oil and (1) 3,000-gallon split tank with 2,000 gallons of new transmission oil and 1,000 gallons of new gear oil. One of the 3,000-gallon tanks of new motor oil and the 2,000 gallons of new transmission oil were not included on the Hazardous Material Inventory submitted via CERS. CORRECTIVE ACTION: Submit an accurate and complete Hazardous Material Inventory via CERS within 30 days of inspection. CERS ID # 10119832

Violation Date: 04-25-2022
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to properly close tanks when making a claim of "permanently closed."
Violation Notes: OBSERVATION: At the time of inspection, observed (1) ~2,000-gallon split tank that was empty and not marked as "Permanently Closed" with the date of closure. CORRECTIVE ACTION: Tanks that are not being used or are not addressed in the SPCC plan must either be included in your plan or meet the permanent closure requirements: 1. All liquid and sludge has been removed from each container and connecting line. 2. All connecting lines and piping have been disconnected from the container blanked off. 3. All valves have been closed and locked. 4. Conspicuous signs have been posted on the container stating that it is a permanently closed container and denoting the date of closure. Provide verification, including a photo, within 30 days of inspection to this Division of proper closure of the (1) ~2,000-gallon split tank.

REED MFG CO (Continued) **S104769486**

Violation Description:	Failure to designate person who reports to management as accountable for discharge prevention at facility.
Violation Notes:	Returned to compliance on 04/03/2019. OBSERVATION: The designated person, David Lawrence, is retired and no longer with the company. CORRECTIVE ACTION: Submit a signed statement indicating that a person who reports to facility management has been designated as accountable for discharge prevention.
Violation Division:	San Bernardino County Fire Department
Violation Program:	APSA
Violation Source:	CERS,
Site ID:	147257
Site Name:	REED MFG CO
Violation Date:	03-26-2019
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each container s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."
Violation Notes:	Returned to compliance on 04/10/2019. OBSERVATION: At the time of inspection, documentation was not provided to show that containers containing petroleum based products were being inspected. CORRECTIVE ACTION: Submit a signed statement indicating that tests and inspections of containers are being properly conducted on a regular schedule or after repair.

Violations:

Site ID:	2930
Site Name:	ACORN-GENCON PLASTICS LLC
Violation Date:	05-18-2021
Citation:	40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description:	Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes:	Returned to compliance on 06/17/2021. OBSERVATION: At the time of inspection, observed (1) 275-gallon tote of used oil, (1) 275-gallon tote of used oily water and (2) 55-gallon drums of used oily absorbent that were not properly labeled. Also observed oil soaked cardboard on the ground being used as absorbent. CORRECTIVE ACTION: Submit a signed statement indicating that the hazardous waste storage area is being inspected weekly.

Violation Date: 05-18-2021
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 06/17/2021. OBSERVATION: At the time of inspection, observed oil soaked cardboard being used as absorbent on the ground in the hazardous waste storage area. CORRECTIVE ACTION: Remove all contaminated absorbent and properly clean up any oil residue on the ground and place in used absorbent drums on site. Submit photos to this division demonstrating the contaminated absorbent has been properly removed and managed.

Violation Date:	06-22-2022
Citation:	40 CFR 1 265.171 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.171
Violation Description:	Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes:	Returned to compliance on 07/25/2022. OBSERVATION: At the time of the inspection, observed the 30-gallon poly drum to have a hole in preventing proper filling. CORRECTIVE ACTION: Remove and replace the damaged drum as soon as possible. Ensure all hazardous waste containers are in good condition prior to adding waste. Provide a photo to the inspector within 30 days of the inspection showing the damaged 30-gallon poly drum removed from service.

DIRECT MOTION INC (Continued) **S124913410**

Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 07/25/2022. OBSERVATION: At the time of the inspection, observed the facility to have multiple open was collection containers. CORRECTIVE ACTION: Ensure all hazardous waste storage containers remain fully closed unless waste is being added or removed from the container. Provide photos to the inspector within 30 day of this inspection showing the waste containers fully closed when not in use.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violations:
Site ID: 104665
Site Name: CHEMCOR CHEMICAL CORPORATION
Violation Date: 03-05-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 04/06/2020. OBSERVATION: The CERS business plan was last updated on 2/27/2019. The plan must be updated annually before March 1. CORRECTIVE ACTION: Review and certify the business plan via CERS. Ensure that the Micolin products are added to the inventory and the federal hazard classifications are updated for each inventory item.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-18-2020
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Contact person Jeff Jaeger, jeff@greatpacificelbow.com, 916-826-4447. This is a new business. The SWPPP was available online and the last visual was dated February 5, 2020. Jeff indicated that he would see that the SWPPP is printed for the site. The site has 1 sampling location on the east side of the facility. The west side of the facility also has a discharge that is not sampled. In addition, there is run-on from the northern facility at two locations.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 10/18/2016. Business Plan not up to date.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 56062
Site Name: PENSKE TRUCK LEASING CO, L.P.
Violation Date: 09-03-2013
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.
Violation Notes: Returned to compliance on 09/03/2013.
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 56062
Site Name: PENSKE TRUCK LEASING CO, L.P.
Violation Date: 02-20-2020
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: OBSERVATION: At time of inspection, observed (1) 300 gallon container of waste coolant open when not in use located in the north west corner of the maintenance shop. CORRECTIVE ACTION: Close all the hazardous

	waste containers and submit photos to the CUPA demonstrating that the container listed above has been properly closed.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	56062
Site Name:	PENSKE TRUCK LEASING CO, L.P.
Violation Date:	02-20-2020
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each container s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."
Violation Notes:	OBSERVATION: At time of inspection, SPCC Plan indicated tank integrity testing is conducted according to Steel Tank Institute (STI) SP001 guidance but SPCC Plan did not indicate annual integrity testing. In addition, at time of inspection, operator was unable to demonstrate how interstitial space of double walled tanks are monitored. CORRECTIVE ACTION: Update SPCC plan to include annual tank testing and inspections as required by STI SP001 and conduct tank inspections on a regular schedule according to SPCC plan. Submit a signed statement indicating that tank tests and inspections are being properly conducted on a regular schedule.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site ID: 135607
Site Name: MISSION LANDSCAPE COMPANIES INC
Violation Date: 05-14-2015
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Haz Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 06/10/2015. Failure to retain Hazardous Waste Manifests for at least 3 years (CCR 66262.40(a)) Hazardous waste manifests were not available for review. Submit a signed copy of the certificate of compliance to indicate compliance.
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 135607
Site Name: MISSION LANDSCAPE COMPANIES INC
Violation Date: 08-28-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 09/25/2018. A hazardous materials business plan was submitted into the California Environmental Reporting System (CERS) on 2/10/18 but observed (3) 55 gallon drums of hydraulic oil that were missing from the most recent inventory and the emergency response section was missing the emergency response number. CORRECTIVE ACTION: Submit a signed statement indicating that an update business plan has been submitted via CERS.

MISSION LANDSCAPE SERVICES, INC. (Continued) **S109521221**

6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 09/19/2018. The most recent waste disposal record available for review was date 1/16/18. Accumulation time has exceeded. CORRECTIVE ACTION: Submit a copy of the most recent hazardous waste disposal record or submit a copy of the manifest for the pick up of all hazardous wastes.

Has Projects:	Yes
NPL Status:	Not on the NPL
Property History:	The camp site was originally constructed to house laborers associated with various Work Programs Administration (WPA) projects in the Chino area. At the beginning of WWII, a quartermaster unit of the New York National Guard moved into the camp. Eventually, the National Guard vacated the property and the camp returned to housing farm laborers. In October 1944, the Army established a German prisoner of war camp at the site. The prisoners were used as farm labor in the region. In April 1945, the camp became a sub-depot to the Pomona Ordnance Depot. A newspaper article from May 194S relates a fire and explosion in a quonset hut storing gas bombs, hand grenades, and small arms ammunition. No other information regarding storage and use of ordnance at this site was found. The date the Army terminated use of the camp is unknown. The camp was acquired by the Chino Junior Fair Association in 1956 from the State of California. Currently, an approximate 10 acre parcel is privately owned and used for storage of heavy equipment. The remainder of the property is occupied by the Chino Fairgrounds.

RAB: Not reported
NPL Status: Not reported
Description: There are two portions to this site: A square shaped lot approximately 10 acres) and a rectangle shaped lot, which is now the Chino Fairgrounds, consisting of 20 acres. The 10 acre lot is located immediately north of the Chino Fairgrounds and is under lease by Tri State Equipment Rentals and Starlite Safety Supply. The 10-acre lot is currently being used for heavy equipment storage associated with the activities of Tri-State Equipment Rentals and Sales. The lot is completely disturbed with various portions undergoing shallow excavation. No part of this lot is covered but consists of bare soil and sporadic vegetation. The lot is completely fenced. Remnants of the former POW camp were not observed. No part of the site appears to be contaminated. The Chino Fairgrounds completely occupies the rectangular 20-acre (approximately) lot. The western half of this lot is undeveloped and bare soil. Part of this area is covered with trimmed vegetated and part is covered with rock and gravel for parking. No evidence of contamination or remains of the former POW camp were observed in this portion of the 20-acre lot. This half of the lot appears to be used for parking during fairground events. The eastern half of the fairgrounds is largely developed. one large building (Brinderson Hall) occupies the middle of the fairgrounds and is the multi-purpose building. It also contains the office for the facility. North of this large building are a couple of small storage shelters, restrooms, and a mobile home which is the residence for the onsite caretaker. A grass area is present south of the Hall and extends almost to the southern boundary of the fairgrounds. Immediately east of Brinderson Hall is the outdoor pavillion which is designed for rodeos. It consists of bleachers, a large bare dirt riding area, and a staging area for the animals. A stable area is located at the northeast corner of
History: The camp site was originally constructed to house laborers associated with various Work Programs Administration (WPA) projects in the Chino area. At the beginning of WWII, a quartermaster unit of the New York National Guard moved into the camp. Eventually, the National Guard vacated the property and the camp returned to housing farm laborers. In October 1944, the Army established a German prisoner of war camp at the site. The prisoners were used as farm labor in the region. In April 1945, the camp became a sub-depot to the Pomona Ordnance Depot. A newspaper article from May 194S relates a fire and explosion in a quonset hut storing gas bombs, hand grenades, and small arms ammunition. No other information regarding storage and use of ordnance at this site was found. The date the Army terminated use of the camp is unknown. The camp was acquired by the Chino Junior Fair Association in 1956 from the State of California. Currently, an approximate 10 acre parcel is privately owned and used for storage of heavy equipment. The remainder of the property is occupied by the Chino Fairgrounds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/21/2022
Date Data Arrived at EDR: 11/21/2022

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 11/21/2022

Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/08/2022
Date Data Arrived at EDR: 08/08/2022
Date Made Active in Reports: 10/21/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools

South Map:	12015909 PRADO DAM, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

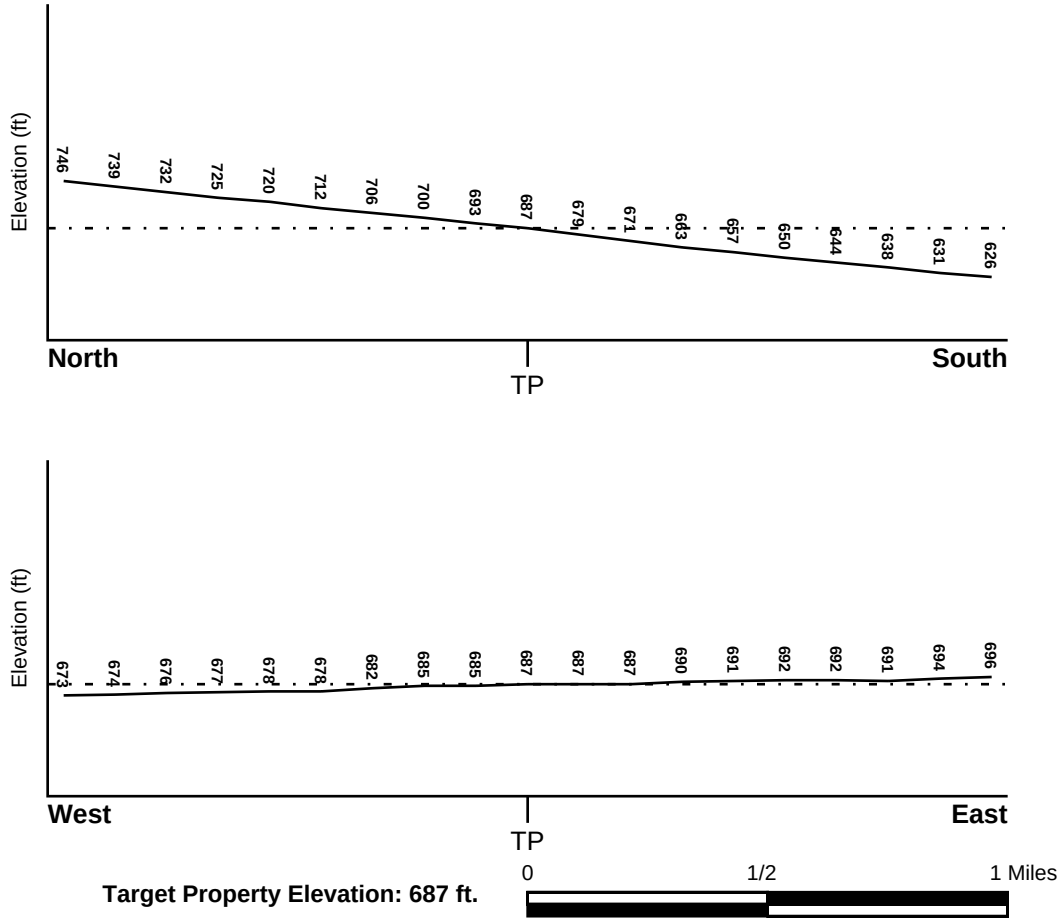

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1750F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C8620H	FEMA FIRM Flood data
06071C8615H	FEMA FIRM Flood data

06071C9335H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ONTARIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHINO

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6
2	11 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

ATTENTION: TRACY ROBERTS

SUBJECT: CERTIFIED RECORD SEARCH FINDINGS
13925 BENSON AVENUE, CHINO, CALIFORNIA
APN #: 1021-211-02-0000

This is to confirm that the San Bernardino County Hazardous Materials Division has identified records that may pertain to the subject site, as described in your request for records search.

The file(s) shown below have been retrieved for review. If you wish to view the original documents, please e-mail this office at hazmatrecords@sbcfire.org to arrange an appointment.

ACTIVE PERMIT FACILITIES: (Regulatory files for facilities with annual operating permits to maintain underground storage tanks, handle hazardous materials, and/or generate hazardous waste. Files include permits, inspections, reports, test results, correspondence, and related materials. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities still in operation).

M Co, Inc, 13925 Benson Ave Chino	FA0004533 ~ Est # 88016467 ~ CERS ID 10041661 Hazardous Materials 1-3 Chemicals Handler Permit Hazardous Waste Generator Permit***INACTIVE*** (Last CERS Submission: 7/21/2020)

INACTIVE PERMIT AND/OR NON-PERMIT FACILITIES: (Inactive regulatory files for formerly permitted facilities that maintained underground storage tanks, stored hazardous materials, and/or generated hazardous waste and/or facilities with underground storage tanks removed and/or materials and waste removed. Files will also include any underground tank removal/construction activity records and site remediation/contamination records for facilities no longer operating underground tanks).

M Co 13925 Benson Ave Chino	Est # 88016467 Hazardous Material Handler, UST only, Permit Underground Storage Tanks Permit

PERMITS TO REMOVE/INSTALL/MODIFY UNDERGROUND STORAGE TANKS:

M Company 13925 Benson Chino	Issued 2/1/1990 Removal (1) – Removed 2/13/1990 Log # 020190-01 ~ Job card # 2241

BOARD OF DIRECTORS

Col. Paul Cook (Ret.)	Jesse Armendarez	Dawn Rowe	Curt Hagman	Joe Baca, Jr.	Leonard X. Hernandez
Vice Chairman, First District	Second District	Chair, Third District	Fourth District	Fifth District	Chief Executive Officer

HAZARDOUS MATERIAL INCIDENT AND/OR COMPLAINT RESPONSE ACTIVITY: (other records of spill notifications and/or complaints not listed below may also exist in facility permit files).

The Letter M Co 13925 Benson Chino	Case # 892200221 9/12/1989 Complaint stating business is using an open spray booth and paint is getting on about 30 cars at another business. Site was inspected on 10/26/1989, case closed.

SITE REMEDIATION: (Underground Storage Tank Clean-Up under Local Oversight Program or Voluntary Hazardous Waste Clean-Up activity under Local Jurisdiction) (documents may be included in regular active or inactive permit files listed above).

No record of site remediation identified in this search.

Records searched include permit database systems for facilities with permits as hazardous waste generators, hazardous materials handlers, and/or underground storage tanks, including inactive and/or out of business records; logs of permits issued for the removal and/or installation of underground storage tanks; records and databases pertaining to illicit dumping and releases; records of non-permitted facilities; sites undergoing remediation for contaminated soil and/or groundwater; and incidents responded to by the hazardous materials emergency response team. Records searched date back to the mid-1980's.

Records consist of 3 files, approximately 2" thick, combined. You may contact us at hazmatrecords@sbcfire.org to request and schedule a file review appointment to view the file(s).

M COMPANY
13925 Benson
Chino, CA 91710

ATTN: LEON MARTIN

As per my inspection of the M Company on October 26, 1989, the following conditions must be met for your company to be in compliance with San Bernardino County Environmental Health laws.

1. An EPA ID number is required, enclosed are documents to receive one.

2. Waste paint is considered to be a hazardous waste and must be manifested off site to a licensed hazardous waste disposal facility.

3. Stored waste paint must be in sound containers, these containers must be kept closed except when adding wastes.

4. Waste containers must be labelled and dated as to the first day of accumulation.

5. Warning signs must be posted in areas where hazardous wastes are stored.

6. The underground storage tank must either be properly upgraded to meet County monitoring standards or else removed. Enclosed are the requirements for both the County standards for monitoring your underground tank and also for removing your tank.

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapter 6.5 and 6.95 of the California Health and Safety Code (CHSC) and Division 3 of Title 2 of the San Bernardino County Code (CC)

THE FOLLOWING SECTIONS ARE IN VIOLATION IF THEY ARE CHECKED

General Requirements:

☐ 101. / 201. Hazardous Waste and/or Materials Permits not current. (CC 23.0602(a))
Compliance requirement: Submit fees within 30 days of billing.

☐ 104. EPA ID Number not obtained for waste generation. (CCR 66262.12(a))
Compliance Requirement: Obtain permanent EPA ID Number by submitting Form 1358 to DTSC. Submit your EPA ID Number to this Division.

☐ 106. Facility not operated to prevent a spill or release. (CCR 66265.31)
Compliance Requirement: Facility must conduct housekeeping and operate to prevent all spills. Signature on certification denotes compliance.

☐ 107. A Contingency Plan has not been established. (CCR 66265.51(a))

☐ 202. A Business Plan has not been established. (CHSC 25503.5)

☑ 203. A Business Plan has not been submitted / updated (CHSC 25505)
Compliance Requirement: Submit the original and one copy of the Business Emergency/Contingency Plan to this Division. NOTE: You must keep a current copy of your Business Emergency/Contingency Plan onsite and available at all times.

INVENTORY: 11-249 CU.FT. OZ CONTAINERS
1-499 GAL PROPANE TANK
8-55 GALLON DRUMS LATEX PAINT

☐ 131. Training documentation not complete or available. (CCR 66262.34(d)(2))
Compliance Requirement: Submit training documentation as required.

Container Storage and Labeling Requirements:

HAZARDOUS WASTE IS NO LONGER BEING GENERATED ON SITE.

☐ 110. Hazardous waste containers are not labeled. (CCR 66262.34(f)(3))

☐ 111. Hazardous waste label is incomplete. (CCR 66262.34(f)(3))

☐ 112. Accumulation start date is missing from label. (CCR 66262.34(f)(2))
Compliance Requirement: Hazardous waste label is to be applied to the container. All fields and lines are to be correctly completed.

☐ 113. Accumulation time exceeded. (CCR 66262.34)
Compliance Requirement: Dispose of waste using a licensed waste hauler within 30 days. Submit copies of disposal documents to this Division.

RECEIVED
JUN 23 2004
COUNTY FIRE DEPARTMENT
HAZARDOUS MATERIALS

☐ 114. Hazardous waste container not sound. (CCR 66265.171)

☐ 115. Hazardous waste container leaking. (CCR 66265.173(b))

☐ 116. Hazardous waste container open when not in use. (CCR 66265.173(a))
Compliance Requirement: Waste containers must be sound, not leaking and closed when not in use.

Waste Management:

PROVIDE PROOF OF APPROVED DISPOSAL OR REMOVAL OF UNLABELED DRUMS (TWO) ON LEASED PROPERTY ON SITE

☐ 119. Hazardous waste managed unlawfully. (CHSC 25154)
Compliance Requirement: Hazardous waste containers and aboveground tanks must be labeled, closed, and inspected (weekly or daily, as appropriate). Waste is to be removed by a licensed waste hauler within the allowed time periods.

☐ 127. Failure to retain **manifested** waste disposal records for 3 years. (CCR 66262.40(a)) 7/27/04

☐ 137. Failure to retain **consolidated** waste disposal records for 3 years. (CHSC 25160.2(b)(3))
Compliance Requirement: Submit copies of waste disposal records for the past

☐ 138. Unlawful management of used oil filters. (CCR 66266.130)
Compliance Requirement: Label all used oil filter containers with "DRAINED USED OIL FILTERS" and the accumulation start date.

Comments: TRAILERS ARE REPAIRED AND MANUFACTURED.

Inspector: CHARLES BANTUM **Received by:** **Title:**

GENERATOR AND HANDLER INSPECTION REPORT

Facility Name: M CO, INC. Inspection Date: 6/8/04
Street Address: 13925 BENSON AVE. Facility ID No: FA0004533
City: CHINO Zip Code: 91710 EPA ID No: CAL000042234
Facility Contact: LEON MARTIN Phone: (909)627-3574 # of Employees: 10 Packet left on site? Yes/No

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapter 6.5 and 6.95 of the California Health and Safety Code (CHSC) and Division 3 of Title 2 of the San Bernardino County Code (CC)

THE FOLLOWING SECTIONS ARE IN VIOLATION IF THEY ARE CHECKED

General Requirements:

☐ 101. / 201. Hazardous Waste and/or Materials Permits not current. (CC 23.0602(a))
Compliance requirement: Submit fees within 30 days of billing.

☐ 104. EPA ID Number not obtained for waste generation. (CCR 66262.12(a))
Compliance Requirement: Obtain permanent EPA ID Number by submitting Form 1358 to DTSC. Submit your EPA ID Number to this Division.

☐ 106. Facility not operated to prevent a spill or release. (CCR 66265.31)
Compliance Requirement: Facility must conduct housekeeping and operate to prevent all spills. Signature on certification denotes compliance.

☐ 107. A Contingency Plan has not been established. (CCR 66265.51(a))

☐ 202. A Business Plan has not been established. (CHSC 25503.5)

☒ 203. A Business Plan has not been submitted / updated (CHSC 25505)
Compliance Requirement: Submit the original and one copy of the Business Emergency/Contingency Plan to this Division. NOTE: You must keep a current copy of your Business Emergency/Contingency Plan onsite and available at all times.

INVENTORY: 11-249 CU.FT. O2 CONTAINERS
1-499 GAL PROPANE TANK
8-55 GALLON DRUMS LATEX PAINT.

☐ 131. Training documentation not complete or available. (CCR 66262.34(d)(2))
Compliance Requirement: Submit training documentation as required.

Container Storage and Labeling Requirements: HAZARDOUS WASTE IS NO LONGER BEING GENERATED ON SITE.

☐ 110. Hazardous waste containers are not labeled. (CCR 66262.34(f)(3))

☐ 111. Hazardous waste label is incomplete. (CCR 66262.34(f)(3))

☐ 112. Accumulation start date is missing from label. (CCR 66262.34(f)(2))
Compliance Requirement: Hazardous waste label is to be applied to the container. All fields and lines are to be correctly completed.

☐ 113. Accumulation time exceeded. (CCR 66262.34)
Compliance Requirement: Dispose of waste using a licensed waste hauler within 30 days. Submit copies of disposal documents to this Division.

☐ 114. Hazardous waste container not sound. (CCR 66265.171)

☐ 115. Hazardous waste container leaking. (CCR 66265.173(b))

☐ 116. Hazardous waste container open when not in use. (CCR 66265.173(a))
Compliance Requirement: Waste containers must be sound, not leaking and closed when not in use.

Waste Management: PROVIDE PROOF OF APPROVED DISPOSAL OR REMOVAL OF UNLABELED DRUMS (TWO) ON LEASED PROPERTY ON SITE

☐ 119. Hazardous waste managed unlawfully. (CHSC 25154)
Compliance Requirement: Hazardous waste containers and aboveground tanks must be labeled, closed, and inspected (weekly or daily, as appropriate). Waste is to be removed by a licensed waste hauler within the allowed time periods.

☐ 127. Failure to retain **manifested** waste disposal records for 3 years. (CCR 66262.40(a))

☐ 137. Failure to retain **consolidated** waste disposal records for 3 years. (CHSC 25160.2(b)(3))
Compliance Requirement: Submit copies of waste disposal records for the past

☐ 138. Unlawful management of used oil filters. (CCR 66266.130)
Compliance Requirement: Label all used oil filter containers with "DRAINED USED OIL FILTERS" and the accumulation start date.

Comments: TRAILERS ARE REPAIRED AND MANUFACTURED.

Inspector: CHARLES BANTUM **Received by:** A. Bantum **Title:**

Sign and submit the yellow copy of this form within 30 days with the required documents listed in each "Compliance requirement" section.

I certify that I have met the compliance requirements of this Notice of Violation:

SUPPLEMENTAL INSPECTION REPORT

FACILITY NAME:	FACILITY LOCATION:
M Company, Inc	13925 Benson, Chino

Facility inspected for compliance with hazardous material and hazardous waste laws and regulations. The facility was inspected with Fred Vasquez.

Facility manufactures chassis for mobile homes and mobile offices. The metal for the chassis are cut, welded and painted. Stairs are also made here.

Electric arc welders are used to do most of the welding. ~8 oxygen compressed gas cylinders are used. Full and empty cylinders are separated and chained to a wall.

The chassis are then painted in an open building with no filters. SCAQMD allows the spraying of up to 68 pounds of VOC's per day. The building is covered and open on one side. The chassis are sprayed with a water-based flat gray/black paint #442. The stairs are painted with #330, a gloss black paint. They are 12-55 gallon drums are the 2 paints on site.

Over-sprayed paint is scrapped periodically from the building floor and put on the asphalt in the NE part of the site. A 40-yd^3 container is filled and the rest of the paint is left until another container can be brought in. A large amount of dried paint is on the asphalt at this time.

In the East/NorthEast area of the site is the drum and container storage area. There are over 40-55 gallon drums, 150-5 gallon containers and 30-1 gallon containers in this area. Most of the containers are empty or unusable. The metal drums are sold or reused to hold parts and supplies.

The Business Plan was last updated in 1997.

Only manifest available is from 11-19-2001 for a 40-yd^3 container that was removed and taken to Filter Recycling Services under manifest #21703971.

NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

Dear Requestor:

On 1/10/23 the Department of Toxic Substances Control (DTSC) received your email of 1/10/23 requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

DTSC's Hazardous Waste Tracking System (HWTS) may have records that pertain to this request. This unit tracks toxic waste generator, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov/report_search.cfm?id=5. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS Unit by email at hwtsreports@dtsc.ca.gov or by phone at (916) 324-2444 for further information.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available.

Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me via email at.

Sincerely,

Julie Chandler

Public Records Request Number: PR3-011023-17

Location: 13925 Benson Ave., Chino, CA 91710

APN: 1021-211-02-0000

Dear Ms. Roberts:

On January 10, 2023, the Department of Toxic Substances Control (DTSC) received your email of the same date requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the site/facility referenced above.

However, DTSC's Hazardous Waste Tracking System (HWTS) may have records that pertain to this request. This unit tracks toxic waste generators, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS unit by email at hwtsreports@dtsc.ca.gov or by phone at (800) 618-6942 for further information. For copies of manifests, please send an email to mcr@dtsc.ca.gov.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSC's data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is

available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 818-717-6521 or via email at ChatsworthFileRoom@dtsc.ca.gov.

Sincerely,

Robert Hardison
Records Mgmt. Asst. Coordinator

RE: PUBLIC RECORDS REQUEST of January 30, 2023, Reference # R006738-013023

Dear Senior Staff Geologist Tracy Roberts,

CAL FIRE received a public information request from you on January 30, 2023. Your request mentioned:

“Hello,

Leighton Consulting, Inc. is requesting information for the following property in the city of Chino, San Bernardino County:

• 13925 Benson Ave; and
• San Bernardino County APN: 1021-211-02-0000.

We are requesting any information concerning hazardous waste/materials, underground storage tanks, leaking underground storage tanks cleanup, inspections, violations, or any other environmental sensitive spills, responses or concerns.

Thank you for your assistance.”

CAL FIRE has reviewed its files and has determined there are no responsive documents to your request.

CAL FIRE does not have the capability to respond to requests asking for aboveground/underground storage tanks or hazardous materials facilities within a certain radius of a particular address.

We recommend that you visit the California Regulated Site Portal at https://siteportal.calepa.ca.gov/nsite/map/help

Information on facilities or locations/areas that have been reported to the State Warning Center for hazardous materials spills or releases may be found on the Governor’ s Office

of Emergency Services (Cal OES)

HazMat Spill Release Reporting Database (https://w3.calema.ca.gov/operational/malhaz.nsf/$defaultview).

To search for nearby pipelines please visit: https://www.npms.phmsa.dot.gov/

To search for open fire code violations please submit a records request with your local jurisdiction.

If you have any questions or need additional information, you can manage your request through the CAL FIRE PRA Records Center.

Sincerely,
Shilo Wilson
Public Records Act Coordinator
Sacramento - HQ - Legal Office

To monitor the progress or update this request please log into the CAL FIRE PRA Records Center

Notes and Definitions

DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry
RPD	Relative Percent Difference
E	Estimated Concentration; concentration exceeds calibration range.
LCC	Leak Check Compound
MDL	Compound Reported to Method Detection Limit

Page 7 of 7.

Client	Rexford Industrial Reality
Project Name	13925 Benson Avenue
Project Address	13925 Benson Avenue, Chino, California
Email	bmcculloch@leightongroup.com
Phone	(949) 394-2306
Report To	Brynn McCulloch
Sampler	Tracy Roberts, Faith Burkett
Date	2/8/23
Client Project #	13807.002

Sample Container / Preservative Abbreviations
AS - Acetate Sleeve
SS - Stainless Steel Sleeve
BS - Brass Sleeve
G - Glass
AB - Amber Bottle
P - Plastic
SOBI - Sodium Bisulfate
MeOH - Methanol
HCl - Hydrochloric Acid
HNO3 - Nitric Acid
O - Other (See Notes)

APPENDIX H

Important Information about This

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered,* because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.
