EXECUTIVE SUMMARY

URS Corporation Americas (URS) was retained by Prologis (formerly AMB Property Corporation [AMB]) (collectively Prologis) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the Prologis Edison Avenue property located at 5088 Edison Avenue in Chino, San Bernardino County, California (Site or subject property). This Phase I ESA was performed in general conformance with the scope and limitations of the following: 1) American Society for Testing and Materials (ASTM) Standard Practice E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*; and 2) the United States Environmental Protection Agency's (EPAs) standards for All Appropriate Inquiries (AAI). This Phase I ESA was also performed in conformance with the AMB Consultant's Service Agreement (CSA), dated May 15, 2002.

The scope of work for this project included a visual inspection of the Site, performed on March 1, 2012; interviews with the property tenants and an owner representative; review of pertinent background and historical information; contact with appropriate regulatory agencies; prior ownership review; review of chemical and waste handling, storage, and disposal practices; observation of land use on surrounding land; review of a regulatory database report; review of a previous ESA performed by others; and photographic documentation of the Site.

The Site is located at 5088 Edison Avenue in Chino, San Bernardino County, California. The Site resides on approximately 18.3 acres of land on assessor's parcel numbers 1021-011-16-0000 and 1021-011-17-0000. The Site is currently improved with four single story buildings, one wood frame building consisting of approximately 4,897 square feet (Office Building), and three concrete tilt-up industrial warehouse buildings consisting of approximately 27,205 square feet (Manufacturing Building 1), 34,988 square feet (Manufacturing Building 2), and 28,848 square feet (Manufacturing Building 3). The Office Building, Manufacturing Building 1 and Manufacturing Building 2 were constructed in 1974 and Manufacturing Building 3 was constructed in 2006. The Site also includes concrete loading areas, asphalt-paved parking areas, and landscaping.

The Site is occupied by two tenants: RedBuilt, a manufacturer of wood and metal trusses used in construction, and Pac-Van, a company that modifies and sells or leases storage containers, mobile offices and modular buildings. RedBuilt, the primary tenant, occupies all four Site buildings for manufacturing, warehousing and office administration. Pac-Van subleases an office area in Manufacturing Building 3 and an unpaved exterior storage area in the northern portion of the Site.

During the Site inspection, regulated quantities of hazardous materials were observed at the Site, primarily in Manufacturing Building 1, including 55-gallon drums of formaldehyde, resin, oil, and various adhesives. These drums were being stored on concrete flooring with secondary containment.

In addition, one and five-gallon containers of propane, hydraulic fluid, paints, cleaners, lubricants, wood preservatives, mineral spirits and other wood related chemicals were being stored in a flammable locker and at satellite worker stations. In addition, minimal hazardous materials are also stored at the Site consisting of small quantities (one gallon or less) of maintenance chemicals and cleaners. Regulated quantities of hazardous wastes were also observed at the Site, including 55-gallon drums of waste glue, waste glue water, waste resin, and waste oil. These waste drums are all

stored in a concrete bermed and concrete paved fenced exterior storage area located on the south side of Manufacturing Building 1. No significant environmental concerns were identified for hazardous material and waste storage at the Site.

According to historical documents, the Site was vacant land or used for agricultural purposes from at least 1938 until current development of the Site began in 1974 with the construction of the Office Building and Manufacturing Buildings 1 and 2 for Trus Joist Corporation, a wood and metal truss manufacturing facility similar to the currently existing occupant. Since development, the Site has been occupied by a truss manufacturing facility, doing business under various names including Trus Joist Corporation, Trus Jois Macmillan, Macmillan Weyerhaeuser, and RedBuilt. According to interviewees and building department records, Manufacturing Building 3 was constructed in 2006 for the manufacturing of shear panels but was only operational briefly until August 2007, due to a slowdown of residential development. Pac-Van has occupied the Site since at least 2010.

The Site is listed for formerly containing two petroleum underground storage tanks (USTs). The USTs were removed in 1988 under permit and oversight of the San Bernardino County Fire Department (SBCFD). Soil sampling performed during removal did not identify evidence of a release warranting further action and the SBCFD issued regulatory closure in 1996. Based on the removal testing data and regulatory case closure, the former USTs do not pose RECs to the subject property and no further assessment is warranted.

URS has performed a Phase I ESA of the Prologis Edison Avenue property located at 5088 Edison Avenue in Chino, San Bernardino County, California in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. The assessment did not identify any recognized environmental conditions (RECs) for the subject property, and no further assessment is warranted.

This Executive Summary is presented for convenience only and should not be used in lieu of information presented in the entire report.

1.0 INTRODUCTION

URS Corporation Americas (URS) was retained by Prologis (formerly AMB Property Corporation [AMB]) (collectively Prologis) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the Prologis Edison Avenue property located at 5088 Edison Avenue in Chino, San Bernardino County, California (Site or subject property). This Phase I ESA was performed in general conformance with the scope and limitations of the following: 1) American Society for Testing and Materials (ASTM) Standard Practice E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*; and 2) the United States Environmental Protection Agency's (EPAs) standards for All Appropriate Inquiries (AAI). This Phase I ESA was also performed in conformance with the AMB Consultant's Service Agreement (CSA), dated May 15, 2002.

1.1 Purpose

The purpose of this report is to identify *recognized environmental conditions* (RECs) in connection with the Site prior to Prologis' acquisition of the subject property. The ASTM Standard Practice E1527-05 defines RECs as the following: *The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures of the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

1.2 Scope of Work

The scope of work for this project included the following primary tasks:

- Performance of a reconnaissance survey of the subject property to make visual observations of existing Site conditions and activities, and a drive-by survey of the area within ¼-mile of the Site to observe types of general land use;
- Review and evaluation of a federal, state, and local database list search provided by Environmental Data Resources, Inc., (EDR) of known or potential hazardous waste sites or landfills, and properties currently under investigation for environmental violations.
- Conduct inquiries in person, by telephone, or in writing to the appropriate regulatory agencies for information regarding environmental permits, violations or incidents, and/or the status of enforcement actions at the subject property.
- Conduct interviews with a Site owner representative and occupant, contact of which was provided by Prologis.
- Reviewed pertinent, readily available documents and maps regarding local physiographic and hydrogeologic conditions in the Site vicinity.

- Review readily available documents from EDR regarding background and historical use information for the subject property.
- Review and evaluation of prior assessment documents for the Site or neighboring properties, as provided by Prologis or obtained from local regulatory agencies.
- Limited evaluation of select non-ASTM considerations, including wetlands, asbestos, lead in drinking water, lead in paint, radon gas, and mold.
- Preparation of this summary report.

1.3 User Reliance

This report has been prepared for use solely by Prologis and shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of URS.

1.4 Deletions & Deviations

It was the intent of the Phase I ESA to make all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice. Furthermore, it was the intent of this document to permit Prologis to satisfy one of the requirements to qualify for the innocent landowner defense to CERCLA liability. This Phase I ESA did not deviate from general requirements set forth in the ASTM Standard Practice E1527-05 and EPA's AAI, and no significant data gaps were identified.

1.5 Limitations

In evaluating the Site, URS has also relied upon representations and information furnished by individuals, agencies, and companies noted in the report with respect to existing operations and property conditions and the historic uses of the property to the extent that the information obtained has not been contradicted by data obtained from other sources. Accordingly, URS accepts no responsibility for any deficiency, misstatements or inaccuracy contained in this report as a result of misstatements, omissions, misrepresentations, or fraudulent information provided by the persons interviewed or documents reviewed.

URS' objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental and engineering consulting professionals, in accordance with the standard for professional services for a national consulting firm at the time these services are provided. The opinions expressed are based on the probability for occurrence of environmental related liability, based on limited information and limited scope of services. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, URS cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, conclusions, and recommendations expressed in the report.

The findings, observations, conclusions, and recommendations expressed by URS in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the Site with any federal, state, or local law or regulation. No warranty or guarantee, whether express or implied is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

1.6 URS Qualifications

This Phase I ESA was prepared by URS representative Kevin Sheridan, a California Professional Geologist (PG) and a California Registered Environmental Assessor (REA). Mr. Sheridan has over 20 years of experience providing national environmental due diligence and site assessment services and directing environmental remedial actions. Mr. Sheridan meets the AAI definition of an Environmental Professional and therefore is qualified to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases of hazardous substances.

This Phase I ESA was reviewed by URS representative Scott Allin, a California Class II Registered Environmental Assessor (REA II). Mr. Allin has over 20 years of experience providing national and international environmental due diligence services, and directing environmental remedial actions for various local and state regulatory agencies. Mr. Allin meets the AAI definition of an Environmental Professional and therefore is qualified to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases of hazardous substances.

2.0 SITE DESCRIPTION

Site description information was obtained from various sources during this ESA. The location of the Site is shown in Appendix A (Figure 1: *Site Location Map* and Figure 2: *Site Vicinity Map*).

2.1 Legal Description

The Site is located at 5088 Edison Avenue in Chino, San Bernardino County, California. The Site resides on approximately 18 acres of land and is located at an approximate Latitude North 33.998000 and Longitude West 117.6943000. According to the San Bernardino County Assessors' Office (SBCAO), the Site encompasses approximately 18.3 acres of land consisting of two parcels, a northern and southern parcel, with assessor's parcel numbers (APNs) 1021-011-16-0000 and 1021-011-17-0000, respectively.

2.2 Improvements

The Site is currently improved with four single story buildings, one wood frame building consisting of approximately 4,897 square feet (Office Building), and three concrete tilt-up industrial warehouse buildings consisting of approximately 27,205 square feet (Manufacturing Building 1), 34,988 square feet (Manufacturing Building 2), and 28,848 square feet (Manufacturing Building 3). The Office Building, Manufacturing Building 1 and Manufacturing Building 2 were constructed in 1974 and Manufacturing Building 3 was constructed in 2006. The Site also includes concrete loading areas, asphalt-paved parking areas, and landscaping. Improvements are further discussed in Section 5.1.

2.3 Owner

According to the owner representative, Mr. Pamplona, the Site is currently owned by Weyerhaeuser, which purchased the Site from Trus Joist Corporation in approximately 2000. Weyerhaeuser reportedly sold the truss manufacturing business that occupies the Site to RedBuilt in August 2009.

2.4 Zoning

According to the City of Chino Planning and Zoning Department (CPZD), the Site and all adjacent properties are zoned M-2 for heavy industrial uses.

2.5 Utilities

According to the interviewed property manager and CPZD, utilities provided to the Site include electricity, natural gas, water and sewer services. Southern California Edison (SCE) provides electricity. Southern California Gas provides natural gas. The City of Chino Water Utilities Department provides water and sewer services.

2.6 Current Use

The Site is occupied by two tenants: RedBuilt, a manufacturer of wood and metal trusses used in construction, and Pac-Van, a company that modifies and sells or leases storage containers, mobile offices and modular buildings. RedBuilt, the primary tenant, occupies all four Site buildings for manufacturing, warehousing and office administration. Pac-Van subleases an office area in Manufacturing Building 3 and an unpaved exterior storage area in the northern portion of the Site.

According to the interviewed property manager, the Site has only been occupied by RedBuilt since 2010, but the Site has been occupied by basically the same truss manufacturing business under different names and/or owners since it was originally developed in 1974. Pac-Van has subleased the office area in the Manufacturing 3 building and the rear yard since at least 2010.

Plant operations are described in Section 5.1. Onsite hazardous materials use and hazardous waste generation and their associated storage areas are described in Section 5.4.

3.0 REGIONAL DESCRIPTION

Regional information was obtained from sources listed below and from observations obtained during the Site reconnaissance.

3.1 Topography

Topography of the Site and surrounding area is characterized as relatively flat. According to the EDR radius map obtained during this ESA, the average elevation of the property is approximately 671 feet above mean sea level (msl). The United States Geological Survey (USGS) 7.5-minute map of the Prado Dam, California Quadrangle, dated 1967 and photo-revised in 1981, shows that the topography slopes gently to the south.

3.2 Surface Water

According to topographic maps reviewed during this ESA, the nearest surface water body to the Site is the Chino Creek, which is located approximately 1 mile southwest of the Site

3.3 Floodplains

According to the EDR radius map obtained during this ESA, the Site is not located within a 100-year or 500-year floodplain (FEMA Map panel #06071C). Areas identified as being within the 500-year floodplain are located approximately 0.25-miles west of the Site.

3.4 Geology

According to the U.S. Department of Agriculture, Soil Conservation Service STATSGO data reviewed by EDR, the soils in the vicinity of the Site are classified as belonging to the Merrill silty loam and Chino silty loam series. These series are made up of well-drained soils that formed in alluvium. These soils have moderate infiltration rates and coarse textures. Soils consist of silt and clay mixtures from 0 and 59 inches.

Based on available regional information, the Site is located in the southern portion of the Transverse Ranges of southern California in the Los Angeles Basin. This subject area is located within the northeastern block portion of the Los Angeles Basin, which consists of a 35-mile long triangular wedge between the San Gabriel Mountains and the Puente and Repetto Hills. The subject property is located within a portion of the Chino Basin which gently slopes toward the southwest. The Chino Basin is underlain by a south-plunging depression and, according to California Division of Mines and Geology maps (Santa Ana Sheet, 1966), the subject property is underlain by undifferentiated Quaternary (recent) alluvium deposited on Pleistocene through Late Cretaceous marine and non-marine clastic sedimentary rocks.

Oil and gas field maps, prepared by the California Department of Conservation Division of Oil and Gas and compiled in the 2003 Munger Map Book, were reviewed during this ESA in order to

determine if the Site is located within a known oil field or if a permitted oil or gas well is or was on the Site. Based on published maps for the Site area (Maps W-68), the subject property is located within an active oil producing region of southern California; however, no permitted oil or gas wells are located on the subject property and there are no records in the Munger Map Book of any wells ever being located on the Site. There are active oil/gas wells located within several miles of the subject property, the closest of which are to the south in the Prado Corona Oil Field. There are several abandoned gas wells or completed abandoned oil wells within a few miles of the Site depicted on the Munger maps. Based on this information, oil and gas wells do not pose an identified environmental concern for the Site.

3.5 Hydrology

The Site specific depth to groundwater at the subject property is unknown. In general, groundwater in this area is contained within the Chino Groundwater Basin, which is approximately 235 square miles and is located in the upper Santa Ana River Watershed. The Chino Groundwater Basin is a relatively flat, alluvial valley that slopes at a 1% to 2% grade from a high of approximately 2,000 feet in the foothills below the San Gabriel Mountains, to a low of approximately 500 feet near the Prado Dam. In general, groundwater in the Site area flows in a south-southwesterly direction towards the Prado Dam and then flows into the Santa Ana River, based on topographic slope and regional well information.

According to the City of Chino Public Works Department, the regional depth to groundwater in the vicinity of the subject property is approximately 60 to 100 feet below ground surface (bgs), based on regional well records. According to a previous assessment, the depth to groundwater in the general area of the Site is 60 to 65 feet bgs based on well measurements at an nearby facility (Crown Coach at 13799 Monte Vista Ave.).

There were no groundwater monitoring wells observed on the Site at the time of the URS Site inspection or reported on the Geotracker website.

3.6 Surrounding Properties

The Site is located in a mixed use industrial and commercial area. URS observed the following uses during the Site reconnaissance.

North: The Site is bordered to the north by railroad spurs, followed by (west to east) a triangular-shaped undeveloped lot, two vacant industrial warehouse buildings (5085 and 5125 Schaefer Ave.), and Chino Distribution Center, a larger vacant industrial warehouse building formerly occupied by Parker Furniture (13850 Central Ave.). Further northwest is a vacant lot formerly occupied by Crown Coach (13799 Monte Vista Ave). These properties are bordered to the north by Schaefer Avenue followed by additional industrial warehouse and office buildings.

South: The Site is bordered to the south by Edison Avenue, followed by (west to east) a vacant industrial warehouse building (5051 Edison Ave.), Darafeev Resort Furniture (5075 Edison Ave.), and Telephone Avenue. Across Edison Avenue to the southwest is Standard Textile (4925 and 4975 Edison Ave.) and to the southeast is Safeway Industrial Park, a multi-tenant complex which appeared to be primarily vacant (5135-5181 Edison Avenue and 14125-14175 Telephone Ave).

East: The Site is bordered to the east by a large industrial warehouse facility occupied by Closetmaid Corporation/Emerson Storage (5150 Edison Ave.) followed by a mostly vacant multi-tenant business park with only a few occupied units including, General Photonics Corp (5228 Edison Ave.), Diamond Elite Gymnastics (a gym) (14040 Central Ave.) and a barbeque sales office. Central Avenue borders this property to the east.

West: The Site is bordered to the west (north to south) by an unmarked vacant single story building, SPC Retail Display Group (13975 Monte Vista Ave.), and Omni Leather Furniture (4900 & 4950 Edison Ave.) These properties are bordered to the west by Monte Vista Avenue, followed by additional industrial warehouse facilities including Duke Pacific (13425 Monte Vista Ave.), Spectrum (14000 Monte Vista Ave.), and AEP Industries (14000 Monte Vista Ave.).

While light industrial activities were identified in the surrounding area, no specific environmental concerns were noted for adjacent properties inspected by URS from the public right-of-way. Additional discussions regarding off-site environmental conditions are presented in Section 6.0 of this report.

4.0 SITE AND REGIONAL HISTORY

4.1 Aerial Photographs

URS reviewed aerial photographs of the Site and surrounding areas to determine past land uses. The aerial photographs were obtained from a previous ESA performed by others in October 2011 (PES, 2011). The photographs available for review included the years 1938, 1949, 1953, 1968, 1977, 1989, 1994, 2005, and 2006. Copies of the aerial photographs are included in Appendix D. Information obtained from the aerial photograph review is summarized below.

1938 - 1968 – The 1938 through 1968 aerial photographs depict the Site as undeveloped, agricultural land. Edison Avenue is seen along the southern property line, and Schaefer Avenue, Monte Vista Avenue and Central Avenue are seen to the north, west, and east, respectively. Adjacent properties in all directions consist of undeveloped agricultural land with scattered small structures seen further north and northeast near Schaefer Avenue and Central Avenue.

1977 – The 1977 aerial photograph depicts the southern parcel of the Site developed and occupied with three of the currently existing four structures, the office building along Edison Avenue and Manufacturing Building 1 and Manufacturing Building 2 to the northwest of it. The Site areas surrounding the three buildings appear to be paved and used for parking and equipment and product storage; however, the northern half of the Site remains undeveloped, possibly still occupied with agricultural uses (i.e. pastureland). The currently existing railroad spur is seen in place running along the northern and western property lines. Adjacent properties to the north, south and east remain undeveloped agricultural land. The adjacent properties to the west are now developed with two of the currently existing industrial warehouse buildings. An increase of both commercial/industrial and residential development is seen in the surrounding area, primarily to the north, including a large industrial building formerly occupied by Crown Coach (see Sections 4.8 and 6.2).

1989 and 1994 – The 1989 and 1994 aerial photographs depict the Site primarily the same as in the previous 1977 photograph. The 1994 photograph shows the northern parcel of the Site unpaved and used for storage of rectangular storage containers, trailers or product. There is a substantial increase in commercial/industrial development seen in the area. Adjacent commercial/industrial properties to the north, south, and east are seen developed as current. The surrounding area is mostly developed with the currently existing uses with very few areas of undeveloped agricultural land remaining.

2005 and 2006 – The 2005 and 2006 aerial photographs depict the Site primarily the same as in the previous photographs, except there are more materials seen stored in the unpaved northern parcel of the Site. The majority of the adjacent properties appear commercially developed, as current. The former Crown Coach facility to the northwest has been removed and the site is now vacant land. No other significant changes were noted from the previous photographs.

Based on URS' review of aerial photographs, the Site was used for agricultural purposes (pasture) from at least 1938 through at least 1968. The southern parcel of the Site was developed with the currently existing office building and two of the three manufacturing buildings by 1977. The northern parcel of the Site was unpaved and used for storage by 1989. While residual agricultural chemicals could exist in Site soils from historic use of the Site for agricultural purposes, the potential presence of these constituents is considered *de minimis* under a developed commercial setting.

4.2 Topographic Maps

URS reviewed historic topographic maps of the Site and surrounding areas to determine past land uses. The topographic maps were obtained from a previous ESA performed by others in October 2011 (PES, 2011). The topographic maps available for review included the years 1901, 1902, 1903, 1941, 1942, 1944, 1947, 1950, 1954, 1967, 1973, 1976, and 1981. Copies of the topographic maps are included in Appendix D. Information obtained from the topographic map review is summarized below.

1901 - 1903 – The 1924 and 1930 topographic maps are series 60, 30, and 15 maps, respectively, and as such the details for the Site location are not visible. The general Site area is depicted as vacant with only a few small buildings (i.e. single family residences) seen in the outlying areas.

1941 – The 1941 topographic map is a series 7.5 map and depicts the Site as undeveloped land. The area covered by the map does not cover the northernmost portion of the Site (or Schaefer Avenue). Edison Avenue is in place along the southern property line and Central Avenue is seen to the east. An unpaved road is seen along the eastern property line and to the west where Monte Vista currently exists. Ramona Avenue is in place further west. The only development depicted is scattered small structures (residences) along the few existing streets.

1942 & 1944 – The 1942 and 1944 topographic maps are series 7.5 and 15 maps, respectively, and only covers the northernmost portion of the Site. The depicted Site area is shown as undeveloped land. The area covered by the map does not extend south to Edison Avenue, but Schaefer Avenue is in place to the north. The unpaved road is still seen along the eastern property line. The 1944 map depicts the surrounding area as undeveloped land, either vacant (approximately 10 percent) or occupied with orchards (approximately 90 percent). Scattered small structures (i.e. residences) are depicted along the few existing streets. The City of Chino is depicted to the north and shown as developed (shaded gray or pink) with multiple small streets (i.e. residential).

1947 – The 1947 topographic map is a series 15 map, and as such does not allow for Site details, but the Site is shown as undeveloped land. The area covered by the map does not extend north to Schaefer Avenue, but Edison Avenue is depicted along the southern property

line and shown as an unimproved road, as is Monte Vista Avenue to the west. Ramona Avenue and Central Avenue are seen to the west and east respectively and Camp Ayers, a former prisoner of war camp, is depicted just east of Central Avenue. No other changes were noted from the previous maps.

1950 & 1954 – The 1950 and 1954 topographic maps are series 7.5 maps. The area covered by the 1950 map does not cover the northernmost portion of the Site (or Schaefer Avenue), and the area covered by the 1954 map does not cover the southern portion of the Site (or Edison Avenue). The Site area depicted in the maps is undeveloped land. The 1954 map depicts the surrounding area to the north occupied with orchards. The area formerly labeled Camp Ayers is now identified as Chino Prison. There is a slight increase in small structures seen in the surrounding area, primarily to the northeast. No other significant changes were noted from the previous maps.

1967 – The 1967 topographic map is a series 7.5 map and depicts the Site as undeveloped land. Monte Vista Avenue is in place to the west. An unfinished roadway or driveway extends from a small structure along Schaefer Avenue south through the adjacent property to the north. The area formerly labeled Chino Prison is now identified as Chino Junior Fairgrounds. Several commercial/industrial buildings are seen to farther north near the City of Chino.

1973 – The 1973 topographic map is a series 7.5 map and depicts the Site as undeveloped land. The railroad spur is depicted along the northern and western property lines. Two commercial/industrial buildings are depicted to the west, west and east of Monte Vista Avenue, and a large industrial structure (former Crown Coach facility) is depicted to the northwest. The developed area of the City of Chino (shaded pink) has expanded and few areas are depicted as occupied by orchards. No other significant changes were noted from the previous map.

1976 – The 1976 topographic map is a series 15 map, and as such does not allow for Site details. The map only shows the northernmost portion of the Site. The Site area depicted is shown as undeveloped land with the railroad in place along the northern and western property lines. The developed area of the City of Chino (shaded red) has expanded significantly including areas adjacent to Schaefer Avenue. No other significant changes were noted from the previous map.

1981 – The 1981 topographic maps is a series 7.5 map and depicts the Site as developed with three structures, where the currently existing Office Building and Manufacturing Buildings 1 and 2 exist. A slight increase in commercial/industrial development is seen in the surrounding area, including the addition of an industrial building on the adjacent property to the west. No other significant changes were noted from the previous map.

The topographic maps are relatively consistent with aerial photograph observations and no specific RECs were identified in the topographic maps reviewed.

4.3 Sanborn Maps

URS contacted the EDR library to determine if Sanborn fire insurance maps are available for the area in which the Site is located. Sanborn maps show the location of underground storage tanks (USTs), location of underground pipelines, and types of buildings and industrial activities on properties. Based on the rural history of the Chino area, Sanborn maps are not anticipated to exist for the subject property.

4.4 Historic Site Occupants

URS obtained information regarding historic Site uses through various sources, including Site interviews, a previous Phase I ESA performed in October 2011 that included historical documents (aerial photographs, topographic maps, and a City Directory Abstract), and agency file reviews. According to historical documents, the Site was vacant land or used for agricultural purposes from at least 1938 until current development of the Site began in 1974 with the construction of the Office Building and Manufacturing Buildings 1 and 2 for Trus Joist Corporation, a wood and metal truss manufacturing facility similar to the currently existing occupant. Since development, the Site has been occupied by a truss manufacturing facility, doing business under various names including Trus Joist Corporation, Trus Jois Macmillan, Macmillan Weyerhaeuser, and RedBuilt. According to interviewees and building department records, Manufacturing Building 3 was constructed in 2006 for the manufacturing of shear panels but was only operational briefly until August 2007, due to a slowdown of residential development. Pac-Van, a company that modifies and sells or leases storage containers, mobile offices and modular buildings, has occupied the Site, an office in Manufacturing Building 3 and the northern unpaved storage lot, since at least 2010.

The EDR City Directory Abstract reviewed city directories for the Site addresses and adjacent addresses from 1922 through 2003. The Site address was not listed in the 1922 through 1970 city directories. The first listings for the Site address (5088 Edison Avenue) occurred in the 1975 and 1980 directories, which listed Trus Joist Corporation Chino Plant. The 1985 and 1990 directories list the Site as Trus Joist Corporation and Idaho Trans Continental. The 1996 directory lists Trus Joist MacMillan. The 2003 directory lists Continental Transportation, ID Trans, Trus Jois Inc., and MacMillan Weyerhaeuser. No specific historical listings for the Site appeared to be of significant concern. The reviewed city directories listed adjacent and surrounding properties with a mixture of single family residences and commercial/industrial listings. No specific RECs were identified in the city directory review.

4.5 Historic Site Ownership

URS did not obtain a chain-of-title report for this ESA. According to the interviewed property manager, Mr. Helder Pamplona, the Site is currently owned by Weyerhaeuser (dba RedBuilt), which purchased the Site from Trus Joist Corporation in approximately 2000. According to a previous ESA performed by PES in 2011, Weyerhaeuser reportedly acquired majority ownership in Trus Joist MacMillan in 2000. PES reported that RedBuilt purchased the business from Weyerhaeuser in

August 2009, but continued to own the buildings and land. According to the reviewed building department records, the builder of the Site was Trus Joist Corporation. No other information was obtained during this Phase I ESA.

4.6 Environmental Liens or Use Limitations

According to owner representative, Mr. Helder Pamplona, Production Supervisor for the Site for approximately 25 years (currently dba RedBuilt); and user representative Ms. Janet Frentzel with Prologis, environmental liens or environmental use limitations are not known to exist for the subject property.

4.7 Valuation Reduction for Environmental Issues

According to owner representative Mr. Pamplona and user representative Ms. Janet Frentzel, no valuation reductions for environmental issues exist for the subject property.

4.8 Prior Assessment(s)

During this ESA, Prologis provided the following prior assessment document for review.

- PES Environmental, Inc. (PES), *Level I Environmental Site Assessment, Weyerhaeuser NR Company Facility, 5088 Edison Avenue, Chino, California*, dated October 12, 2011.

This document consisted of a general ASTM standard Phase I ESA (E 1527-05), prepared for the Weyerhaeuser NR Company (Weyerhaeuser). According to PES, at the time of their assessment, performed in October 2011, the subject property was developed as current with the current office building and three manufacturing buildings occupied by current tenant RedBuilt for the same wood and steel truss manufacturing facility. However, PES does not identify Pac-Van as a subleased tenant of the Site.

PES originally performed an ESA on the Site in 2008 during which they identified two former USTs existed on the southeastern portion of the Site near the eastern property line. According to PES, the former USTs consisted of one 10,000-gallon diesel UST and one 2,000-gallon unleaded gasoline UST which were removed from the Site under permit and oversight of the San Bernardino County Fire Department (SBCFD) in August 1988. After their removal, soil sampling was performed beneath the former USTs which were analyzed for the corresponding total recoverable petroleum hydrocarbons (TRPH), total volatile hydrocarbons (TVH), and benzene, toluene, ethylbenzene and xylenes (BTEX), which were not detected except for 2.99 mg/kg TVH beneath the gasoline UST. Based upon the soil sampling analytical results, it was determined that no further excavation or investigation was necessary and SBCFD issued a case closure letter for the USTs on December 9, 1996. The UST removal and case closure documentation is included in Appendix E.

According to PES, hazardous materials used at the Site at this time were primarily limited to oils, glues and paints. PES observed some five-gallon containers of “fresh hydraulic or other oils” being

stored within the buildings on concrete flooring without secondary containment, one of which had minor staining. However, based upon the observed hazardous materials storage practices, PES stated, “No materials handling practices were observed that appeared to pose significant environmental concerns.”

PES identified the nearby Crown Coach, Inc. (13799 Monte Vista Ave.) property on regulatory databases for a release of volatile organic compounds (VOCs). PES identified this facility as a “General Environmental Concern” for its potential to impact groundwater beneath the Site, but did not identify the facility as an REC, apparently due to the anticipated low impact, if any. URS’ current review of documentation for this property (see Section 6.1.2) revealed only trace concentration of VOCs on the down gradient boundary of the Crown Coach property, and as such the release is not anticipated to pose an environmental concern to the Site.

The 2011 PES ESA concluded their assessment identified no current or historical RECs at the Site.

Other information obtained from the PES ESA is included in various sections of this report, as referenced.

5.0 SITE INSPECTION AND INTERVIEWS

URS inspected accessible interior and exterior portions of the Site for evidence of RECs. This included features listed in ASTM Standard Practice E1527-05, but is subject to limitations specified in this report, and the ASTM Standard. Inspection activities were performed on March 1, 2012, and photographic documentation is presented in Appendix B. URS also interviewed individuals provided as knowledgeable of current and historic Site conditions.

5.1 Interviews

During this ESA, URS interviewed the following individuals regarding current and historic use of the subject property: 1) Mr. Helder Pamplona, Production Supervisor with the Site (dba RedBuilt) (owner representative); and 2) Ms. Janet Frentzel, user representative with Prologis. Information obtained from interviewees is provided in various sections of this report, as referenced.

5.2 Site Features

The Site is currently improved with four single story buildings: one wood-framed office building constructed on a slab-on-grade foundation (Office Building) constructed in 1974; two concrete tilt-up manufacturing buildings (Manufacturing Building 1 and Manufacturing Building 2) constructed in 1974; and one concrete tilt-up manufacturing building (Manufacturing Building 3) constructed in 2006. All three of the manufacturing buildings are constructed with steel or wooden columns and wood truss on concrete slab-on-grade foundations. Building specific details are as follows:

Office Building is an approximately 4,897 square foot wood-framed building constructed near the center of the southern property line along Edison Avenue. Within the Office Building are a reception area, a conference room and individual offices. Building materials within the Office Building generally consisted of drywall walls, vinyl floor tiles and suspension ceilings with 2 foot by 4 foot ceiling tiles.

Manufacturing Building 1 is an approximately 27,205 square foot concrete tilt-up building constructed northeast of the Office Building. Manufacturing Building 1 is used for the manufacturing of tubular steel and wood trusses via both automated and manual processes. Six punch presses are used on tubular steel, which is sheared or cut to a desired length, crimped and hole-punched. Ripsaws and scarfers grade and cut the wood trusses prior to being glued and pressed together in glue machines. Drillers and routers cut grooves and punch holes in the wood for anchoring the steel tubes and metal plates. Within the building are a machine shop, a gluing room and a maintenance room. A vacuum system removes the sawdust from the various processes to a bag house area along the northern exterior of the building. Hazardous materials and wastes storage areas are described in Section 5.4

Manufacturing Building 2 is an approximately 34,988 square foot concrete tilt-up building constructed north of Manufacturing Building 1 near the center of the western property line. Manufacturing Building 2 is used for the cutting and prepping of I-beams. Eighty-foot

long wood I-beams are shipped to the Site by rail via a railroad spur along the western property line to the western side of the building and unloaded via an overhead, track-mounted crane into the warehouse until conveyed into a sawing area. Within the warehouse, a chop saw and a backup chop saw are used to cut the I-beams to the desired length and a smaller radial arm saw is used for more detailed cuts. The sawdust is removed via a vacuum system to an exterior bag house area located along the western exterior of the building. The finished I-beams are then bundled and stored onsite prior to shipping.

Manufacturing Building 3 is an approximately 28,848 square foot concrete tilt-up building constructed in the northern parcel, north of Manufacturing Building 2. The structure was reportedly constructed in 2006 for the manufacturing of shear panels to be used in residential construction. However, according to the interviewed owner representative, due to the slowing of residential construction, all manufacturing operations in the building were shut down in August 2007 and the equipment was dismantled and shipped offsite. Manufacturing Building 3 primarily consists of a mostly vacant warehouse used by RedBuilt for storage of materials and some defunct shear panel machinery. An office space located in the eastern portion of the building is subleased by Pac-Van. Building materials within the office area of Manufacturing Building 3 generally consisted of drywall walls, vinyl floor tiles, carpet and suspension ceilings with 2 foot by 4 foot ceiling tiles.

The Site areas surrounding the four buildings include concrete loading areas, and asphalt-paved parking and storage areas. North of Manufacturing Building 3 is an approximately 4.6-acre unpaved area which, at the time of the Site inspection, was being subleased to Pac-Van for use as storage for modular buildings and mobile storage containers. Pac-Van uses welding equipment in the rear yard area to modify the steel containers with doors, windows or racking systems.

The Site is accessed through three driveways off Edison Avenue to the south. Security fencing separates the Site's Office Building and its associated parking lots from the Site's manufacturing areas. URS observed a rectangular concrete pad near the eastern property line near the security gate. According to the interviewed owner representative, the pad is in the general vicinity of the former USTs (see Sections 4.8 and 5.5). Landscaping, consisting of lawns, trees, and flowering shrubs, is located in the southern portion of the Site between Edison Avenue and the security fence. No environmental concerns were identified for the Site's exterior.

5.3 Storm Water

Storm water is drained by runoff into storm drains located in the paved loading and parking areas. The storm water drains to the south into Edison Avenue. According to the interviewed tenant, there is an active storm water pollution prevention plan which includes sampling four discharge points near Edison Avenue during heavy rain events. No evidence of environmental concern for storm water was identified during URS' Site reconnaissance.

5.4 Material & Waste Storage

At the time of URS' Site reconnaissance, regulated quantities of hazardous materials were observed at the Site, primarily in Manufacturing Building 1, including 55-gallon drums of formaldehyde, resin, oil, and various adhesives. These drums were being stored on concrete flooring with secondary containment. In addition, one and five-gallon containers of propane, hydraulic fluid, paints, cleaners, lubricants, wood preservatives, mineral spirits and other wood related chemicals were being stored in a flammable locker and at satellite worker stations. In addition, minimal hazardous materials are also stored at the Site's other three buildings, primarily consisting of small quantities (one gallon or less) of maintenance chemicals and cleaners.

At the time of URS' Site reconnaissance, regulated quantities of hazardous wastes were observed at the Site, including 55-gallon drums of waste glue, waste glue water, waste resin, and waste oil. These waste drums are all stored in a concrete bermed and concrete paved fenced exterior storage area located on the south side of Manufacturing Building 1.

According to the EDR database reviewed during this ESA, there is current permitted hazardous material storage or hazardous waste generated at the Site address (HAZNET database). During the Site inspection the following permits were inspected by URS: San Bernardino County Hazardous waste generator and hazmat handler permit; Chino Valley Fire District cutting and welding permit, hazmat permit, and liquid gas storage permit; AQMD three rollercoater air permits; and a stormwater waste permit. In addition, URS reviewed waste disposal manifests for the Site which appeared to be current and were subcontracted to Clean Harbors or Enviroserv for offsite disposal.

URS did not identify environmental concerns for hazardous material and waste storage at the Site. However, as a best management practice, hazardous material/waste storage practices should be improved since some handling practices observed during URS' inspection included unmarked storage areas, unlabeled containers, *de minimis* surface staining near the storage containers, damaged containers and storage of material outside designated storage areas.

5.5 Storage Tanks

The URS Site visit included a visual inspection of the Site for evidence of UST systems such as vents, fill pipes, fill ports, or unexplained concrete patching. No evidence of current USTs was identified during URS' Site reconnaissance.

Evidence of historical USTs was identified during the review of historical documents, a previous assessment document, and the Site inspection. According to a prior assessment of the Site, two former USTs existed on the southeastern portion of the Site near the eastern property line. According to PES, the former USTs consisted of one 10,000-gallon diesel UST and one 2,000-gallon unleaded gasoline UST which were removed from the Site under permit and oversight of the SBCFD in August 1988. After their removal, soil sampling was performed beneath the former USTs which were analyzed for the corresponding total recoverable petroleum hydrocarbons (TRPH), total

volatile hydrocarbons (TVH), and benzene, toluene, ethylbenzene and xylenes (BTEX), which were not detected except for 2.99 mg/kg TVH beneath the gasoline UST. Based upon the soil sampling analytical results, it was determined that no further excavation or investigation was necessary and SBCFD issued a case closure letter for the USTs on December 9, 1996. URS observed a concrete patch in the area of the former USTs during the Site inspection. Based on the removal testing data and regulatory case closure, the former USTs do not pose RECs to the subject property and no further assessment is warranted. UST removal and closure documentation is included in Appendix E.

No ASTs were observed onsite during the Site visit performed for this ESA.

5.6 Wastewater Discharges

Wastewater discharges from the Site are to the sanitary sewer from the bathroom facilities and sinks, which are discharged to the sanitary sewer system. No current industrial wastewater discharges were identified for the Site.

5.7 Air Emissions

The Site is permitted with the South Coast Air Quality Management District (SCAQMD) for the three rollercaster machines in Manufacturing Building 1. This Site does not fall under regulation by Title V of the Clean Air Act Amendments, which applies to facilities that are considered *major* sources.

5.8 Polychlorinated Biphenyls (PCBs)

Three pad-mounted electrical transformers, all labeled as “PCBs free”, were observed near the Office Building, Manufacturing Building 1 and Manufacturing Building 2.

Fluorescent lights were observed throughout the Site buildings. Based on the construction date of the three original Site buildings (1974), it is possible that PCB-containing ballasts exist onsite. Ballasts for the observed fluorescent lights could not be accessed during URS’ Site inspection for confirmation. Fluorescent light ballasts should be appropriately disposed as universal waste upon replacement.

5.9 Groundwater Wells

No groundwater wells were observed on the Site at the time of the URS inspection.

6.0 ENVIRONMENTAL RECORD REVIEW

6.1 Federal and State Database Review

URS retained EDR to provide a database search of federal and state environmental records. Specific databases searched and the search radius for each is identified in the EDR report. A copy of EDR's report and search radius map is included in Appendix C. The database report was reviewed to note reported releases in the vicinity of the Site that are known to have or are expected to result in an environmental condition that could adversely impact the Site. Reported release sites listed in the regulatory agency database search report were evaluated with respect to the nature and extent of a given release, the distance of the reported release from the Site, and the position of a reported release with respect to known or expected local and/or regional groundwater flow direction (south-southwest, see Section 3.0). Generally, reported release sites located within 0.5 mile up-gradient, 0.25 mile cross-gradient, or adjacent down-gradient were considered to have a potential to impact the Site, and are discussed below. Properties that were listed in the database search report, but were not identified as a release site (for example, a site listed as a hazardous waste generator but not as having had a release) were not considered to have a potential to impact the Site. Any non-release sites identified adjacent to the Site are not discussed. Unless indicated, information that unmapped or orphan facilities identified in the EDR report would adversely affect the Site was not identified.

It should be noted that this information is reported as URS received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either URS or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

6.1.1 Site Listings

According to the EDR database report, the subject property address (5088 Edison Avenue) is listed on the FTTS, HIST FTTS, RCRA-SQG, FINDS, WDS, NPDES, CA FID UST, HIST UST, SWEEPS UST, San Bern. Co. Permit, and HAZNET databases under Trus/Joist Corporation and Trus Joist A Weyerhaeuser Business.

- The FTTS and HIST FTTS listings are related to a US EPA facility Site inspection performed in August 1991 during which no violations were identified.
- The Site is listed on the FINDS database, a US EPA information database, which does not indicate a significant environmental concern for the facility at the Site.
- The Site is listed on the RCRA-SQG database for the generation of small quantities (greater than 100 kg and less than 1,000 kg) of hazardous waste (ignitable hazardous wastes) in 2001. The database identifies that the Site was a large quantity generator (greater than 1,000 kg) in 1994 and 1996. There are no violations listed.

- The Site is listed on the CA WDS and NPDES databases for current and historic permitted wastewater discharges from the facility. The CA WDS listing (Facility ID Santa Ana River 361016335) is identified as Active and the NPDES listing (NPDES #CAS000001) is identified as Terminated, identified as formerly active from January 2001 to August 2009. According to information obtained from the CRWQCB NPDES permit hotline, these listings both appear to relate to storm water management.
- The CA FID UST, HIST UST, and SWEEPS UST listings are related to the former onsite USTs. The HIST UST database identifies the USTs as a 10,000-gallon Diesel UST and a 2,000-gallon leaded gasoline UST that were both installed in 1974. The SWEEPS UST lists the leaded gasoline UST as a 500-gallon UST, which is likely an error based upon other information obtained during this ESA. There is no indication of a release from the former USTs (i.e. LUST listing) and as such the former USTs do not represent an environmental concern for the Site. In addition, according to the PES 2011 ESA, these USTs were removed from the Site in August 1988 under the direction of the SBCFD which issued a case closure letter on December 9, 1996 (see section 4.8).
- The San Bern. Co. Permit listing is for an Active permit (#PT0001943) for the handling of hazardous materials listed under Redbuilt LLC.
- The HAZNET listing is for the disposal of various hazardous waste from 1993 through 2010, including 3.465 tons of unspecified aqueous solution and 0.05 tons of other organic solids (2010), 0.748 tons of unspecified organic liquid and 5.985 tons of unspecified aqueous solution (2009).

6.1.2 Surrounding Property Listings

The following surrounding properties were identified as release facilities on the EDR report within the evaluation criteria described previously. Specific information on these sites is provided below:

Site Name/Address	Database(s)	Distance/Groundwater Gradient Direction	Comments
Crown Coach, Inc. / 13799 Monte Vista Ave.	RCRA-LQG, FINDS, HIST CORTESE, LUST, CA FID UST, HIST UST, SWEEPS UST, San Bern. Co. Permit, HAZNET, EMI	0.321-mile NW/ cross gradient	Currently an undeveloped lot, a site formerly occupied by Crown Coach with a truck and bus manufacturing facility from 1973 through 1987. LUST case listed on EDR database as a solvent release into groundwater with the status Open – Verification Monitoring. According to information obtained on Geotracker and a previous ESA, a release of volatile organic compounds (VOCs - primarily 111 DCE, TCE and PCE) was caused by leaking USTs that were removed in 1988. Soil and groundwater remediation began in the 1990s, and included groundwater and soil vapor extraction systems and a dual-phase extraction system. In 2008, emulsified vegetable

Site Name/Address	Database(s)	Distance/Groundwater Gradient Direction	Comments
			oil was injected into the perched aquifer within the former source area to stimulate the biodegradation of the VOCs in groundwater. The site had approximately 33 monitoring wells in two onsite groundwater zones (deep and shallow); however, some wells were removed to facilitate site redevelopment in 2008. Based on the results of groundwater sampling of temporary monitoring wells in 2009 a groundwater monitoring report recommended to the CRWQCB that no additional investigative or monitoring activity be performed at the Site. In 2010 and 2011 CRWQCB requested and then approved a workplan for the installation of two monitoring wells downgradient to monitor the regional and overlying perched aquifers for five years to verify the absence of impacts. Based upon the information available on Geotracker, it does not appear the perched groundwater plume from the USTs has affected the Site since only trace concentrations of VOCs are present near the property down-gradient boundary. It is URS's opinion that this property is unlikely to affect the Site based on assessment and monitoring activities performed with a responsible party identified and the properties gradient location (cross gradient) from the Site.
Top Brand Equipment Sales LLC 13855 Central Ave.	NPDES, HIST CORTESE, LUST, HAZNET	0.342-mile ENE/ up gradient	LUST case identified as a gasoline release into soil with the status listed as Case Closed. Unlikely to affect the subject property based on the closed status of the case and the media affected (soil only).
Concord Fabrics 13878 Yorba Ave.	HIST CORTESE, LUST, CA FID UST, SWEEPS UST San Bern. Co. Permit, EMI	0.476-mile WNW/ up gradient	LUST case identified as a gasoline release into soil with the status listed as Case Closed. Unlikely to affect the subject property based on the closed status of the case and the media affected (soil only).
Ultramar Cardlock 4820 Schaefer	HIST CORTESE, LUST, SWEEPS UST San Bern. Co. Permit, HAZNET	0.492-mile NE/ up gradient	LUST case identified as a diesel release into soil with the status listed as Case Closed. Unlikely to affect the subject property based on the closed status of the case and the media affected (soil only).

Based on URS' review of the databases and application of the evaluation criteria described previously, release facilities with significant potential to impact the subject property were not identified.

6.2 Local Agency Review

During this ESA URS made inquiries regarding the Site addresses, 5088 Edison Avenue, Chino, California, to the following public agencies.

CBD – URS reviewed the files for the Site addresses at the City of Chino Building Department (CBD) on March 1, 2012. The earliest records for the Site were the original building permits to Trus Joist Corporation for the construction of the original three buildings (Office Building and Manufacturing Buildings 1 and 2), identified as Buildings A, B, and C, that were applied for on October 24, 1973 and finalized on July 5, 1974. Subsequent permits for these three buildings are for various improvements, including plumbing, sprinklers, walls, fencing storage racks, etc. Records at the CBD also included permits to reroof the Office Building dated 1977 and 1993. The CBD records also included the original building permit for Trus Joist Macmillan for the construction of Manufacturing Building 3 which was finalized on April 17, 2006.

SBCFD - URS requested a review of the files for the Site addresses with the CUPA, the San Bernardino County Fire Department (SBCFD) via written request on February 27, 2012. As of this report date, URS has not received a response from this agency. Should the SBCFD response contain information that changes the conclusions and recommendations of this report, an addendum to this report will be forwarded to Prologis.

CVFD - URS requested a review of the files for the Site addresses with the Chino Valley Fire District (CVFD) via personal office visit on March 1, 2012. As of this report date, URS has not received a response from this agency. Should the CVFD response contain information that changes the conclusions and recommendations of this report, an addendum to this report will be forwarded to Prologis.

SCAQMD - URS requested a review of the files for the Site address with the South Coast Air Quality Management District (SCAQMD) and reviewed FIND, the website managed by the SCAQMD. SCAQMD records for the Site address only included current and inactive permits to operate various equipment used during the manufacturing processes performed onsite. These included Adhesive Rolling (1988 to 2009), Adhesive Melting (1992), and Rollercoating (1995 to 2009). The records also include an inactive permit for the former “service station storage and dispensing gasoline”. There is also a record for a permit to operate a solvent degreaser in 1989 that was canceled and never activated. Only one permitting violation was recorded, dated December 2002 and in compliance by January 2003. The current Site status is listed as in compliance. In addition, there were no records related to the removal of asbestos-containing materials (ACMs).

GEOTRACKER - URS reviewed the online database maintained by the State Water Resources Control Board (Geotracker) for releases associated with the subject property address and surrounding properties. The Site address is not identified on the Geotracker database. There are five listings on the database as being located within 1,000 feet of the Site. The nearest release site to the Site is the previously described LUST case at the Crown Coach International facility (13799 Monte Vista Avenue) (see Section 6.2). Three of the remaining four sites are closed cases and the fourth site (Ornyte Fiberglass at 14000 Monte Vista Avenue) is an open case under remediation located approximately 0.203-miles cross gradient from the Site.

ENVIROSTOR - URS reviewed the online database maintained by the DTSC (Envirostor) for releases associated with the subject property address. A search of all Envirostor databases did not reveal listings for the Site address.

7.0 SUPPLEMENTAL CONSIDERATIONS

The following non-ASTM components were included in the scope of work for this ESA.

7.1 Wetlands

Wetlands are jointly defined by the United States Environmental Protection Agency (US EPA) and the United States Army Corps of Engineers as *those areas that are inundated or saturated by surface or groundwater for a duration and frequency sufficient to support and under normal circumstances do support a prevalence of vegetation adapted for life in saturated soil conditions*. According to wetlands information obtained from EDR, the Site is not a designated national wetlands. URS did not observe any suspect wetlands vegetation on the Site. According to EDR and maps reviewed at the City of Chino Planning Department, the nearest designated national wetland is located near the Prado Dam which is greater than 1 mile southwest of the Site.

7.2 Asbestos

The United States Environmental Protection Agency (USEPA) generally banned the use of asbestos in building materials during the 1970's. Building materials are generally found to be free of asbestos after 1981, and suspect asbestos-containing materials (ACMs) installed prior to this date should be assumed to contain asbestos unless testing determines otherwise.

Based on the construction date of the original three Site buildings (Office Building and Manufacturing Buildings 1 and 2) (1974), the potential for ACMs to be present at the Site exists. However, according to the interviewed owner representative and the PES 2011 ESA (see Section 4.8), previous asbestos surveys have been performed on the Site during which no ACMs were identified. No documentation of the previous surveys were obtained during the performance of this ESA, nor during the ESA performed by PES in 2011. In the absence of formal testing data, suspect materials should be assumed to contain asbestos and managed accordingly. Suspect ACMs identified by URS included gypsum wallboard, ceiling tiles, and 12" by 12" vinyl floor tiles and mastic in the Office Building and bathrooms and break rooms in the manufacturing buildings which appeared to be in fair condition.

7.3 Lead-In-Paint

In 1978, the Consumer Product Safety Commission (CPSC) banned the production of virtually all house paints containing lead. Established guidelines for lead in paint include the U.S. Department of Housing and Urban Development's (HUD's) 0.5 percent level. This level is a non-enforceable guideline at which lead abatement measures or Operations and Maintenance programs should be implemented.

Based on the construction date of the original three Site buildings (Office Building and Manufacturing Buildings 1 and 2) (1974), there is a potential for lead-based paint to exist at the Site. Visible painted surfaces appeared in good condition and no further assessment is warranted at this time.

7.4 Lead-In-Drinking Water

Drinking water quality is regulated by the Environmental Protection Agency (EPA) under the Safe Drinking Water Act of 1974. EPA guidelines recommend a maximum level of 15 micrograms per liter (ug/L) of lead in drinking water from commercial and public buildings. It is recommended that remedial actions be taken for lead levels in excess of 15 ug/L in the 90th percentile. These standards are intended for drinking water suppliers (e.g., municipal water authorities); however, the data evaluation process for assessing lead results may be used for other drinking water sources.

Based on the construction date of the original three Site buildings (Office Building and Manufacturing Buildings 1 and 2) (1974), it is possible that lead solder was used on plumbing fixtures. The primary source of drinking water observed during URS' Site reconnaissance was commercially serviced water coolers. Under this use scenario, lead in drinking water is unlikely to pose an environmental concern for the Site.

7.5 Radon Gas

Radon is an invisible, odorless radioactive gas formed by the decay of uranium in the earth's soil that migrates to surface through cracks and pore spaces in the soil. Radon gas dissipates in outdoor settings and is present at concentrations considered to be harmless. However, radon gas can accumulate inside buildings and closed spaces; depending on building location, ventilation, and other factors. The USEPA recommends considering indoor remedial measures when the radon concentration exceeds 4.0 picoCuries per liter (pCi/L) on an annual average basis.

The Site is located in a designated USEPA Radon Zone 2 where the predicted average radon concentration is between 2.0 and 4.0 pCi/L. Based on the USEPA designation and the fact that the current Site buildings have no basements, radon gas generation is unlikely to pose an environmental concern for Site occupants.

7.6 Mold

URS inspected visually accessible building materials for evidence of mold growth during this ESA. No visible evidence of mold damaged building materials was observed during the Site reconnaissance.

8.0 CONCLUSIONS AND RECOMMENDATIONS

URS has performed a Phase I ESA of the Prologis Edison Avenue property located at 5088 Edison Avenue in Chino, San Bernardino County, California in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. The assessment did not identify any recognized environmental conditions (RECs) for the subject property, and no further assessment is warranted.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

TC3269011.1s EXECUTIVE SUMMARY 4

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 3 RCRA-LQG sites within approximately 0.375 miles of the target property.

CROWN COACH, INC	13799 MONTE VISTA AVE	NW 1/4 - 1/2 (0.321 mi.)	J39	66

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 6 RCRA-SQG sites within approximately 0.375 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal- equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRPs) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/07/2012 has revealed that there are 5 ENVIROSTOR sites within approximately 1.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 2 RCRA-NonGen sites within approximately 0.375 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2010 has revealed that there are 3 HAZNET sites within approximately 0.125 miles of the target property.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interests/Information System
 NCB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:
 Facility ID: Santa Ana River 361016335
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

TRUS JOIST A WEYERHAEUSER BUSINESS (Continued) 1000818214

POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nuds without a TTWO will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Environmental Interest/Information System
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not all nurds without a TTWO will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTW0 will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

L47 EN E CHINO PRISONER OF WAR CAMP - ARMY CHINO, CA

FUDS 1007372715 N/A

1/4-1/2 0.340 mi. 1795 ft. Site 4 of 5 in cluster L.

Relative: Higher
 FUDS: Federal Facility ID: CA9799FA384
 FUDS #: J99CA7356
 INST ID: 63092
 Facility Name: CHINO PRISONER OF WAR CAMP - ARMY
 City: CHINO
 State: CA
 EPA Region: 9
 County: SAN BERNARDINO
 Congressional District: 42
 US Army District: Los Angeles District (SPL)
 Fiscal Year: 2009
 Telephone: 213-452-3920
 NPL Status: Not reported
 RAB: Not reported
 CTC: Not reported
 Current Owner: CITY: PRIVATE

FUDS Description Details:

There are two portions to this site: A square shaped lot approximately 10 acres) and a rectangle shaped lot, which is now the Chino Fairgrounds, consisting of 20 acres. The 10 acre lot is located immediately north of the Chino Fairgrounds and is under lease by Tri State Equipment Rentals and Starlite Safety Supply. The 10-acre lot is currently being used for heavy equipment storage associated with the activities of Tri-State Equipment Rentals and Sales. The lot is completely disturbed with various portions undergoing shallow excavation. No part of this lot is covered but consists of bare soil and sporadic vegetation. The lot is completely fenced. Remnants of the former POW camp were not observed. No part of the site appears to be contaminated. The Chino Fairgrounds completely occupies the rectangular 20-acre (approximately) lot. The western half of this lot is undeveloped and bare soil. Part of this area is covered with trimmed vegetated and part is covered with rock and gravel for parking. No evidence of contamination or remains of the former POW camp were observed in this portion of the 20-acre lot. This half of the lot appears to be used for parking during fairground events. The eastern half of the fairgrounds is largely developed, one large building (Brinderson Hall) occupies the middle of the fairgrounds and is the multi-purpose building. It also contains the office for the facility. North of this large building are a couple of small storage shelters, restrooms, and a mobile home which is the residence for the onsite caretaker. A grass area is present south of the Hall and extends almost to the southern boundary of the fairgrounds. Immediately east of Brinderson Hall is the outdoor pavilion which is designed for or rodeos. It consists of bleachers, a large bare dirt riding area, and a staging area for the animals. A stable area is located at the northeast corner of the fairgrounds property.

FUDS History Details:

The camp site was originally constructed to house laborers associated

CHINO PRISONER OF WAR CAMP - ARMY (Continued)

1007372715

with various Work Programs Administration (WPA) projects in the Chino area. At the beginning of WWII, a quartermaster unit of the New York National Guard moved into the camp. Event
 tually, the National Guard vacated the property and the camp returned to housing farm laborers. In October 1944, the Army established a German prisoner of war camp at the site. The prisoners were used as farm labor in the region. In April 1945, the c
 camp became a sub-depot to the Pomona Ordnance Depot. A newspaper article from May 1945 relates a fire and explosion in a quonset hut storing gas bombs, hand grenades, and small arms ammunition. No other information regarding storage and use of ordna
 ance at this site was found. The date the Army terminated use of the camp is unknown. The camp was acquired by the Chino Junior Fair Association in 1956 from the State of California. Currently, an approximate 10 acre parcel is privately owned and use
 ed for storage of heavy equipment. The remainder of the property is occupied by the Chino Fairgrounds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

ARCO FACILITY NO 05967 (Continued) 1004677998

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NJRDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 10/28/1997
 Comments: DTSC approved the submitted Baseline Health Risk Assessment (BHRA). The BHRA documented hazardous substances characteri- zation and assessed the site for risk posed to onsite workers and offsite residents. DTSC reviewed the BHRA under a Voluntary Cleanup Agreement (VCA). Based on the information and data prese in the BHRA, DTSC determined that hazardous constituents re- maining at the site do not pose a threat to human health or the environment. The review and comment constituted completion of the VCA.

Completed Area Name: PROJECT WIDE

 Description: RP states that a fire in the dust collector caused the release of recovered product with the fire fighting water. The dust collector is approximately 10' X 10' X 4' and contained filters. The majority of the filters and polishing compounds remained on site. It is unknown how much product entered the storm drain. The storm drain was protected with booms to help filter out the larger particles.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/30/2011 Source: EPA
Date Data Arrived at EDR: 07/12/2011 Telephone: N/A
Date Made Active in Reports: 09/29/2011 Last EDR Contact: 02/29/2012
Number of Days to Update: 79 Next Scheduled EDR Contact: 04/23/2012
Data Release Frequency: Quarterly

NPL Site Boundaries

EPA Region 3 Telephone 404-562-8033
EPA Region 4 Telephone 312-886-6686
EPA Region 5 Telephone 206-553-8665

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date Made Active in Reports: 09/29/2011 Last EDR Contact: 02/29/2012
Number of Days to Update: 79 Next Scheduled EDR Contact: 04/23/2012
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Cleanup and Remedial Action Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011 Source: EPA
Date Data Arrived at EDR: 07/12/2011 Telephone: N/A
Date Made Active in Reports: 09/29/2011 Last EDR Contact: 02/29/2012
Number of Days to Update: 79 Next Scheduled EDR Contact: 04/23/2012
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011 Source: EPA
Date Data Arrived at EDR: 03/01/2011 Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011 Last EDR Contact: 02/27/2012
Number of Days to Update: 62 Next Scheduled EDR Contact: 06/11/2012
Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010 Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011 Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011 Last EDR Contact: 01/13/2012
Number of Days to Update: 36 Next Scheduled EDR Contact: 04/23/2012
Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011 Source: EPA
Date Data Arrived at EDR: 03/01/2011 Telephone: 703-412-9810

Number of Days to Update: 132 Data Release Frequency: Quarterly

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDR's treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011 Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/07/2011 Telephone: (415) 495-8895

Number of Days to Update: 32 Next Scheduled EDR Contact: 04/16/2012
Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Number of Days to Update: 32 Next Scheduled EDR Contact: 04/16/2012
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011 Source: Environmental Protection Agency
 Date Data Arrived at EDR: 12/30/2011 Telephone: 703-603-0695
 Date Made Active in Reports: 01/10/2012 Last EDR Contact: 12/09/2011
 Number of Days to Update: 11 Next Scheduled EDR Contact: 03/26/2012
 Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/30/2011 Source: Environmental Protection Agency
 Date Data Arrived at EDR: 12/30/2011 Telephone: 703-603-0695

 Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 02/07/2012 Source: Department of Toxic Substances Control
 Date Data Arrived at EDR: 02/07/2012 Telephone: 916-323-3400
 Date Made Active in Reports: 02/22/2012 Last EDR Contact: 02/07/2012
 Number of Days to Update: 15 Next Scheduled EDR Contact: 05/21/2012
 Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDs: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMRPR) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS
EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
 The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/21/2011
 Date Data Arrived at EDR: 11/22/2011

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
 Telephone: (281) 769-2247
 U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
 Telephone: 312-280-5991
 The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
 Telephone: 410-786-3000
 A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
 Telephone: 301-594-6248
 Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
 Telephone: 202-502-7300
 The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
 Telephone: 202-502-7300
 The National Center for Education Statistics' primary database on private school locations in the United States.

Most Recent Revision: 1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

TC3269011.1s Page A-1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

TC3269011.1s Page A-2

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: FEMA Flood Electronic Data
SAN BERNARDINO, CA YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property: 06071C - FEMA DFIRM Flood data
Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Electronic Data Coverage
NWI Quad at Target Property: PRADO DAM YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile NW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

TC3269011.1s Page A-3

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MERRILL
 Soil Surface Texture: silt loam
 Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
 Soil Drainage Class: Somewhat poorly drained
 Hydric Status: Not hydric
 Corrosion Potential - Uncoated Steel: High
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Classification			Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 9 Min: 7.9
2	11 inches	25 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 9 Min: 7.9
3	25 inches	42 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 9 Min: 7.9
4	42 inches	59 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 9 Min: 7.9

TC3269011.1s Page A-6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: CHINO
 Soil Surface Texture: silt loam
 Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
 Soil Drainage Class: Somewhat poorly drained
 Hydric Status: Not hydric
 Corrosion Potential - Uncoated Steel: High
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Classification			Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[®] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

UST REMOVAL AND CLOSURE DOCUMENTATION

COUNTY FIRE DEPARTMENT

COUNTY OF SAN BERNARDINO

HAZARDOUS MATERIALS DIVISION

385 North Arrowhead Avenue, Second Floor • San Bernardino, CA 92415-0153

RICHARD W. SEWELL
Fire Chief
County Fire Warden

December 9, 1996

Trus Joist-Macmillan
5088 Edison Ave.
Chino, CA 91710

**SUBJECT: REMOVAL OF UNDERGROUND STORAGE TANKS
5088 Edison Ave., Chino, California**

This is to confirm that the Hazardous Materials Division has reviewed its records pertaining to the removal of two underground storage tanks conducted at the subject site August 9, 1988.

Records indicate that the removal of two underground storage tanks was witnessed by Walt Froglija, Environmental Technician, and that the removal was performed in accordance with regulatory requirements in effect at the time. The Hazardous Materials Division received a tank closure report and sample results on October 27, 1988, and Mr. Froglija issued final approval for backfill of the excavation on October 31, 1988 (a signed copy of the job card is enclosed). No further investigation was recommended or ordered at that time.

You may consider this letter as written verification of permission for closure. **It is important to note**, however, that this cannot be construed as a release of liability for the site or a declaration that the site is free from contamination. Should further projects or environmental investigations reveal additional contaminants on site, you will be held liable for investigation and remedial action.

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE OF WORK

This report summarizes closure of two underground storage tanks by removal and soil sampling. The subject site is located at 5088 Edison Avenue, Chino, San Bernardino County, California.

The work accomplished on August 9, 1988 consisted of the removal of two underground storage tanks and collection and quantitative analysis of three soil samples, used to document subsurface soil conditions.

1.2 BACKGROUND

Trus Joist Corporation engaged the services of Rudy's Service Station Equipment Maint., Inc. (Rudy's) to perform the excavation and removal of the underground storage tank. Western Environmental Services Incorporated (WES) was employed under Purchase Order No. 4168, by Rudy's to: 1) collect soil samples from beneath the bottom of the tank and 2) prepare this report summarizing results of the tank removal operations. Included herewith are discussions on field procedures, laboratory testing, and analytical results for the soil sample recovered during the excavation and subsequent tank removal.

2.0 FIELD PROCEDURES

On August 9, 1988, two underground fuel storage tanks were removed and disposed of properly. The tanks were delivered to American Metal Recycling, Inc. (AMR) located in Ontario, California. Tank disposal forms and hazardous waste manifests are enclosed in Appendix C and D respectively. The tank capacities and contents as determined by field personnel are summarized on Table 1.

TABLE NO.1
SUMMARY OF UNDERGROUND STORAGE TANK DATA

<u>TANK NO.</u>	<u>CAPACITIES (GAL)</u>	<u>CONTENTS</u>
1	10,000	Diesel
2	2,000	Unleaded

Mr. Luis Argandona
August 10, 1988
Page Two

Following the tank removal, three (3) soil samples were collected at a depth of two feet below each tank invert by a WES geologist. The sample locations are shown on Figure 1 - Site Plan and Sample Locations.

The samples were recovered from the excavation using a backhoe and quickly placed by hand into four ounce glass sample jars, sealed with a teflon-lined lid, labeled and immediately stored on ice in an ice chest until transported to the laboratory. WES chain of custody procedures were followed to ensure the integrity of the sample submitted for analysis.

3.0 GEOLOGY

The subject site overlays alluvial sediments, gravels and cobbles interbedded with coarse grained sands of recent age. The elevation of the tank pit areas is approximately 660 feet above sea level; the surrounding topography slopes to the southwest. A review of California Department of Water Resources (DWR) records, Well No. 2S 8W 23M1, indicates the first principle aquifer beneath the site is greater than 50 feet below the surface; semi-perched zones may occur at shallower depths.

4.0 LABORATORY TESTING AND RESULTS

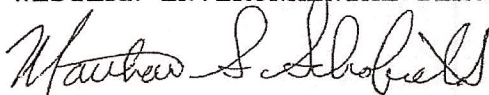

The samples were submitted for analysis to Terra Tech Mobile Lab (office is located in Fountain Valley, California). The samples were tested for total volatile hydrocarbons in accordance with E.P.A. method 8015 ; Benzene, Toluene, Xylenes and Ethylbenzene (BTXE) in accordance with E.P.A. method 8020, and total recoverable hydrocarbons in accordance with E.P.A. method 418.1. Laboratory certificate and chain-of-custody records are included in Appendix A and B respectively. Based on laboratory results for the samples collected, it appears no hydrocarbon contamination exists at the site.

Mr. Luis Argandona
August 10, 1988
Page Three

5.0 CONCLUSIONS

In accordance with both State and County Guidelines for Underground Storage of Hazardous Materials, WES has completed a field sampling program associated with the removal of two underground fuel storage tanks at the subject facility. The results of field study indicated no petroleum based hydrocarbons in the soil at the tank pit location. If we can be of further assistance or provide further information, feel free to call.

Sincerely,
WESTERN ENVIRONMENTAL SERVICES INCORPORATED

NOTE: The State of California has determined that tanks used for the storage of any hazardous or flammable substance shall be considered hazardous even if all contents have been removed.

All storage tanks shall be hauled as hazardous waste, accompanied by a state hazardous waste manifest, and taken to a licensed treatment, storage and disposal facility (TSDF); or if the tanks are triple rinsed on site and the rinsate manifested and hauled to a licensed TSDF, the tank may be handled as nonhazardous.

For information on licensed TSDF's that can accept nonrinsed tanks contact the State of California Department of Health Services, Toxic Substance Control at (213) 620-2380.

APPENDIX F

PHASE ONE OPINION LETTER

SCHEDULE D-1
PROLOGIS EDISON AVENUE
CHINO, CALIFORNIA
PHASE ONE OPINION

The undersigned, being a duly authorized environmental professional employed by URS Corporation Americas (URS) hereby certifies to Owner, pursuant to this opinion (the "Phase One Opinion"), as follows:

1. that, for purposes of this Phase One Opinion, the term "hazardous substances", "hazardous materials", or "toxic substances" (collectively, "Hazardous Substances") shall refer to those terms as defined in the Applicable Environmental Laws and as specifically described in that certain environmental report prepared by URS (the "Report"), attached hereto as Exhibit a, pertaining to the Property described in the Engagement Letter;

2. that, for purposes of this Phase One Opinion, the phrase "Scope of Work" shall refer to those services described in Schedule a to that certain Consultant's Service Agreement described in the Engagement Letter;

3. that, for purposes of this Phase One Opinion, the phrase "Applicable Environmental Laws" shall refer to federal and state environmental statutes and regulations applicable as of the date of this Phase One Opinion pertaining to the presences, handling, treatment and disposal of Hazardous Substances;

4. that, to the extent that URS investigation of the Prologis Edison Avenue property located at 5088 Edison Avenue in Chino, California (the Property) is limited by legal, physical, and/or other restrictions, including without limitation, URS inability to gain access to a portion of the Property or to a building situated on the Property, URS certifies that URS has (a) fully advised the Owner in writing of URS inability to gain access to a portion of the Property; (b) fully advised the Owner in writing as to what could be done by URS to gain access to the inaccessible portion of the Property in order to conduct an investigation thereof; and c) fully advised the Owner in writing as to what should be done to investigate the inaccessible portion of the Property. Notwithstanding the fact that no consulting firm can guarantee the absence of Hazardous Substances at the Property, to the extent that URS has access to the Property to investigate the Property for Hazardous Substances, URS hereby certifies that the investigation of the Property conducted by URS is based on the usual thoroughness and competence of the consulting engineering profession and is reasonably designed to assess the probability of and ascertain and identify Hazardous Substances at the Property. URS investigation of the Property shall include, without limitation, site assessments, field sampling, testing and such other appropriate inquiries into the previous ownership and uses of the Property, as more particularly set forth in the Scope of Work;

5. that, in URS' professional opinion, which is based on the usual thoroughness and competence of the consulting engineering profession, as of the date of this Phase One Opinion, (a) the results of the Phase One Services indicate that (I) Hazardous Substances are or were present, as specified in the report, and were not mishandled or improperly stored, and (ii) Hazardous Substances identified in soil, groundwater or improvements are of such small quantities or low levels, and (iii) there is such a low probability that the Property contains any Hazardous Substances that URS recommends that neither Owner nor Consultant undertake any additional work at or near the Property respecting the subject matter of the Consultant's Service Agreement, (b) to the best of Consultant's knowledge, after diligent inquiry, the Property is in compliance with Applicable Environmental Laws, and c) the Owner has not inhibited or limited the performance of Consultant's work in any way;

6. that the Owner acknowledges that URS is the sole consulting engineering firm retained by the Owner for the purposes of investigating the Property for Hazardous Substances and expressing an opinion with respect to the Property's compliance with Applicable Environmental Laws;

7. that URS acknowledges that the Owner is relying on the representations and certifications made, and the opinions given, by URS herein, and in the Report, with respect to the subject matter of the Consultant's Service Agreement in connection with its decision to purchase the Property; and

8. that this Phase One Opinion has been prepared solely for the use of Owner and Advisor. If any third party relies on any aspect of this Phase One Opinion, it shall do so at its own risk and URS shall have no responsibility to such third party with respect thereto.
