

# Wax Leaves

## Supplies

- fall leaves
- paraffin wax
- mini crock pot
- old tongs
- wax paper

## Instructions

1. Place about half a small box of paraffin wax in the crockpot.
2. Allow wax to melt for about 30 minutes until completely melted.
3. When the wax is melted, dip the leaves fully in the wax using a pair of tongs. Be careful not to touch the hot wax with your fingers. (Note: tongs will not come clean)
4. Dip the leaves in the wax more than once. The more wax on the leaves, the more the wax will be seen. One or two coats should be fine. Make sure to dip the stems too, it will help keep them from breaking.
5. Lay a piece of waxed paper on the counter near the crockpot to place dipped leaves to dry. The leaves will dry in a minute or less.
